

- OGP supports the ongoing work by ACER and ENTSOG on the CAM Implementation Roadmap
- Initiatives for early implementation of CAM result in 2 contracts after capacity is allocated as a bundled product
 - Single capacity contract involving different MS is not feasible
- Bundling has benefits in the allocation phase, but
 - Should not be used to restrict trade at physical hubs and force changes to supply contracts
 - When MS, NRAs and TSOs treat entry- and exit-capacity separately, users should not be forced to implement bundling
- OGP proposes ‘2-contract-model’ for TSOs and network users
