

- OGP welcomes the CEER/ACER work on Incremental Capacity
  - Ideally this should have been addressed in CAM
  - At this stage, should avoid a major overhaul of CAM NC
- OGP believes Incremental can be incorporated in CAM NC
  - Support 2-step approach of open-season followed by CAM, with some additional rules to avoid 'free rider' effects (incentives to shippers triggering the investment)
- Network users should have certainty about forward tariffs
- Market test should set investment threshold in advance and be transparent to network users
  - NRAs should set minimum coverage by long term bookings rather than setting quotas for mid- and short-term
