

Dear Ladies and Gents,

here my recommendations about your:

4.1. General QUESTIONS

• Which lessons from the 2020 framework and the present state of the EU energy system are most important when designing policies for 2030?

The lesson: to my understanding, the framework confirms that up to now there were no significant results therefore nor suitable planning or actions, in spite of the great effort.

The state of the EU energy system: actually based on fossil fuels requires a very ambitious and complete up side down change of paradigm, this should be done within 2030.

Some of the major factors I would recommend you to consider are the following:

- Stop GHG by drastic emissions tax systems while promoting with their revenues incentives on emissions saving and natural capturing, such as the enhancement of any photosynthesis activity.
- Make a road map to disinvest from all type of energy systems based on fossils fuels and invest the related amounts on the production of decentralize renewable energy sources.
- Increase taxation on capitals concentration and promote wealth distribution.
- The actual GDP system based on consumption is economically unsustainable and must come to an end, the sooner the better, EU should build its new GDP policy based on potential saving and not the contrary as it is now.
- The promotion of activities, education, scientific resource, industrial, agriculture, aiming to increase the employments should be concentrated there where the target is to save (energy, food, raw material, land, water, air, etc.....)
- The control of areas where fossils fuels are produced and their routs are passing, is causing conflicts all over the world, therefore by reducing its addiction from them EU will reduce International interest and related tension about them, save money and give the example of how to peacefully fight this increasing unsustainable humanitarian drama.

The above, to my opinion, are more or less answering all your questions.

In case you like my further contribution I'll be glad to cooperate.

Best Regards

Giovanni Marocchi
