Subject: consultation as a citizen

Dear European Comission,

I have but one comment, to Instruments:

the necessary one is the EU-wide fee-and-dividend mechanism, as advocated by James Hansen. 2030 target should be over EUR 100 per ton of CO₂, a reasonable amount seems to be EUR 300. It might be CO₂ equivalent if practicable.

The fee is collected at the mine or point of entry, and is applied to all goods as well, by an educated guess, if it had not been applied in the country of their production.

The dividend is equally distributed per capita.

This way, the market will react well.

sincerely,

Jan Hollan, Ph.D.
