

GIE views on Main challenges of Network Code implementation in the EU

Jean-Marc Leroy, GIE President

29th Madrid Forum, 7 October 2016

Main challenges of Network Code implementation in the EU

- GIE recognizes the important steps all involved stakeholders have made in realizing the NC on CMP, CAM, BAL, INT, TAR
- GIE shares the view that further work should concentrate on
 - the implementation of Network Codes and
 - on the implementation monitoring and
 - evaluation of the effectiveness of their measures
- Amendments of Network Code should be based on a complete Impact Assessment on all topics to be revised
 - e.g. CAM Code focused on additional topics not consulted with stakeholders

GIE is proud to support

Gas Naturally

GN is a campaign to showcase the essential role of natural gas in the forthcoming energy revolution. The mitigation of climate change has become one of the most important issues for the gas industry.

Thank you for your attention
