

# CONSULTATION ON STREAMLINING OF PLANNING AND REPORTING OBLIGATIONS AS PART OF THE ENERGY UNION GOVERNANCE

Fields marked with \* are mandatory.

## What this consultation is about

The Commission's State of the Energy Union presented on 18 November 2015 states that "[t]he Energy Union needs a reliable and transparent governance process, anchored in legislation, to make sure that energy-related actions at European, regional, national and local level all contribute to the Energy Union's objectives." This corresponds to similar calls from the European Council and the European Parliament[\*].

The State of the Energy Union also underlines that "[i]ntegrated national energy and climate plans, addressing all five dimensions of the Energy Union, are necessary tools to have more strategic planning", and that "[i]n order to track progress, a transparent monitoring system needs to be put in place based on key indicators as well as on Member States' biannual reports concerning progress made on their national plans". This builds further on the Commission's Communication on the Energy Union from February 2015, which explained that a purpose of the governance process for the Energy Union is to "streamline current planning and reporting requirements, avoiding unnecessary administrative burden".

In this context, the present consultation seeks stakeholders' views on current planning and reporting arrangements in the energy field, and on how these could be improved to better serve the objectives of the Energy Union and to reduce administrative burden. An overview of existing planning and reporting obligations in the energy sector concerning the Member States as well as the Commission is available here: [COM planning and reporting obligations \(energy field\)](#); [MS planning and reporting obligations \(energy field\)](#); [COM planning and reporting obligations \(climate field\)](#); [MS planning and reporting obligations \(climate field\)](#).

The responses to the public consultation will feed into the Commission's evaluation and fitness check of existing planning and reporting obligations (a REFIT initiative in the Commission's 2015 Work Programme) as well as into the Impact Assessment for the Commission's proposal(s) for streamlining of planning and reporting in the energy field foreseen for late 2016, as announced by the State of the Energy Union.

The consultation as well as the initiatives it will contribute to should be understood in the broader context of the Energy Union strategy; the Commission's guidance to Member States on national plans from 18 November 2015, and the Council's Conclusions on Energy Union governance from 26 November 2015 – which underscore the need for holistic national plans that address all five dimensions of the Energy Union in an integrated way.

This public consultation also relates to the preparation of other initiatives to implement the Energy Union foreseen for 2016 (notably initiatives on energy efficiency, renewable energy and electricity market design). For other completed and ongoing public consultation processes and their outcomes, see: <http://ec.europa.eu/energy/en/consultations>.

[\*] REF to EUCO October 2014 and March 2015; EP 15 Dec 2015.

The questionnaire is structured as follows:

- A. Respondent's profile
- B. Evaluation of existing planning obligations
- C. Evaluation of existing reporting obligations
- D. Options for streamlining planning and reporting obligations
- E. Options for the governance of the Energy Union

Questions marked with an asterisk (\*) are mandatory.

\*

## A. Respondent's profile

Please provide information to help us build your profile as a respondent. In accordance with Regulation 45/2001[\*], all personal data collected through this survey will be kept securely and will ultimately be destroyed.

[\*] Regulation (EC) No 45/2001 of the European Parliament and of the Council of 18 December 2000 on the protection of individuals with regard to the processing of personal data by the Community institutions and bodies and on the free movement of such data, OJ L 008, 12.1.2001, p.1.

### A.1 Are you answering as an individual or on behalf of an organisation/institution?

- ☐ I am answering as an individual.
- ☒ I am answering on behalf of an organisation.

### A.2 Please specify your main field of activity.

**Please tick the appropriate field. Only one choice is possible:**

- ☐ Individual citizen
- ☐ National public authority (central or local government)
- ☐ Private company/ Industry association
- ☐ International organisation
- ☐ Workers' organisation/trade union
- ☐ Research organisation/university
- ☒ NGO
- ☐ Other interest group organisation/association

Other - please specify:

\*

**A.3. Please indicate your country of residence/establishment:**

If answering as an individual, please provide your country of residence.

If answering on behalf of an organisation/institution, please provide the country of establishment of the organisation/institution.

Please tick the appropriate field, only one choice is possible.

- ☐ Austria
- ☐ Belgium
- ☐ Bulgaria
- ☐ Croatia
- ☐ Cyprus
- ☐ Czech Republic
- ☐ Denmark
- ☐ Estonia
- ☐ Finland
- ☐ France
- ☐ Germany
- ☐ Greece
- ☐ Hungary
- ☐ Iceland
- ☐ Ireland
- ☐ Italy
- ☐ Latvia
- ☐ Liechtenstein
- ☐ Lithuania
- ☐ Luxembourg
- ☐ Malta
- ☐ Netherlands
- ☐ Norway
- ☐ Poland
- ☒ Portugal
- ☐ Romania
- ☐ Slovenia
- ☐ Spain
- ☐ Sweden
- ☐ Slovakia
- ☐ Switzerland
- ☐ United Kingdom

Other/international - please specify:

\*

#### A.4 Name and contact details

- ☐ I prefer to provide a general comment only. Please provide your general comment in the box below. (up to 2000 characters)
- ☒ I will provide my name and contact details in the boxes below.

[Questionnaire ends here]

Name:

Francisco Ferreira

Organisation (*where applicable*):

ZERO - Associação Sistema Terrestre Sustentável

Address:

<http://zero.org>

ID from the Interest Representative Register[\*] (*where applicable*):

Telephone:

Email:

[zero@zero.org](mailto:zero@zero.org)

[\*] In the interest of transparency, organisations (including, for example, NGOs, trade associations and commercial enterprises) are invited to provide the public with relevant information about themselves by registering in the Interest Representative Register and subscribing to its Code of Conduct. If you are a registered organisation, please indicate the name and address of your organisation and your Register ID number on the first page of your contribution. Your contribution will then be considered as representing the views of your organisation.

\*

**A.5 Received contributions may be published on the Commission's website, with the identity of the contributor. Which publication arrangement would you agree upon?**

- ☒ My contribution may be published under the name indicated.
- ☐ My contribution may be published but shall be kept anonymous.
- ☐ I do not agree that my contribution will be published.

**B. Evaluation of planning obligations**

***Existing obligations***

The EU energy and climate legislation includes a number of different planning obligations for the Member States. Planning obligations play a crucial role for EU energy policies in e.g. the fields of renewable energy, energy efficiency, security of gas supply, energy performance of buildings, waste management and decarbonisation. The main features of existing planning obligations can be summarised as follows:

- Current planning obligations usually include indicators and projections as an analytical basis as well as policies and measures needed to achieve the plan's objectives;
- Current plans usually cover a specific area of the energy or climate field, but do not necessarily refer to possible overlaps and interactions with other plans in these fields; in some cases templates are provided, which can be either voluntary or compulsory;
- Plans often have to be submitted once, but in many cases a periodical revision or the submission of new plans is required. The process for the adoption of the plans is often left to the discretion of the Member States;
- The role of the Commission varies. In some cases, it monitors plans, in other cases, it analyses plans and is requested to report to the European Parliament and the Council. In some instances the Commission could ask for modifications. Furthermore, it can use its enforcement powers, if the planning obligations are not fulfilled or not all the necessary details/content were provided.

1) How would you rate the following aspects of such planning obligations at EU level?

	Very important	Important	Less important	Not important	No opinion
Coherence of national plans among all EU Member States	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Effective and efficient implementation of EU legislation in the energy and climate field	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Achievement of the EU energy and climate objectives	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Increased certainty for investors across all EU Member States stimulating economic growth as well as research, innovation and competitiveness of the EU	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Better implementation of international commitments by the EU as a whole and by Member States (e.g. concerning the reduction of greenhouse gas emissions)	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
The Commission is better enabled to provide substantial and useful advice	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

**If other, please explain: (up to 1000 characters)**

Effective planning and reporting (P&R) can help the EU achieve its energy and climate goals, ensuring that policies are coherent and mutually reinforcing, provide investor certainty and create an enabling environment, which allows the EU and MS to move to a 100% renewable-based, fossil fuel-free economy by 2050. Future plans should build upon existing NREAPs and NEEAPs, and improve reporting on trajectories and policy developments per sector, technology and measure. P&R obligations should be based on clear, detailed mandatory templates enshrined in legislation. This will help the planning process, monitoring, accountability, consistency, comparability of MS progress towards the targets and exchange of information and knowledge. P&R processes should be fully in line with the most ambitious international rules, e.g. those under the UNFCCC and Kyoto Protocol. MS plans should include a strategy for a retirement process for polluting power plants and the phase-out of fossil fuel subsidies.

**2) Are you aware of overlaps or inconsistencies among the existing planning obligations in the same or different areas of the energy and climate acquis? Please provide examples. (up to 1000 characters)**

- The timing of the reporting obligations is not consistent - e.g. the Renewable Energy Directive, the Energy Efficiency Directive, the Effort-sharing Decision and the Monitoring Mechanism Regulation (and also the EEA and UNFCCC) all have different 'deadlines';
  - The templates for the different plans are not all mandatory;
  - The targets set are not all binding;
  - At EU level, using different data and projections for different assessments.
- For example:
- 1) the Commission's security of supply package from 16 February 2016 used a low 25% energy efficiency scenario for 2030 to assess Europe's gas import dependency and a higher 30% scenario for the heating and cooling strategy;
  - 2) Grid planning by the ENTSOs and for PCIs uses a different set of energy supply and demand scenarios, creating inconsistencies such that grid planning is not optimised for the energy transition and creating the risk of over-investment in gas infrastructure.

**3) a) Which of the current planning obligations could in your opinion be streamlined[\*] into one integrated plan and why? (up to 1500 characters)**

Streamlined planning and reporting requirements could provide an opportunity to highlight the synergies between the climate and energy targets and their policies, such as the benefits of RES and energy savings as key measures to reduce GHG emissions. It would have a number of advantages, including all the benefits of a holistic approach, under the condition that a streamlined approach fully adheres to all relevant European and international standards. In principle, any integrated national climate and energy plan should aim at ensuring coherence and synergies between the different planning obligations, targets and assumptions, and give a overview of the general direction that each MS is willing to take to fulfil its medium and long term climate and energy targets. This being said, the planning and reporting requirements included in the current directives need to be safeguarded and the revision of these requirements be based on what currently exists in the sectorial legislation. In any case, one would also need to carefully ensure coherence between what is adopted in the framework of the revision of the specific directives, on the one hand, and the proposed planning and reporting legislative instrument on the other hand, especially if the timing of these two processes is different.

**b) Are there any planning obligations that should be kept separate from the integrated plan? (up to 1500 characters)**

**c) Are there any planning obligations that could be repealed? (up to 1500 characters)**

[\*] By streamlining we understand the possibility to integrate planning and reporting obligations resulting from (different) sectorial legislation by reducing possible duplications or gaps in the reporting and planning obligations, thereby ensuring transparency, coherence, relevance, efficiency and effectiveness of the reporting and planning. Furthermore planning and reporting cycles should be harmonised to the extent possible.

**4) Which elements/articles of the current planning obligations in the field of renewable energy do you consider indispensable and why? If relevant please, refer to specific [Articles of the Renewable Energy Directive](#). (up to 1000 characters)**

Post-2020 national plans should capitalise on the NREAPs' building blocks, namely overall and sectoral renewable energy shares by 2030, indicative trajectories and a binding template (Art. 4/ Annex VI).

Member States should define the renewable energy element of their national plans building upon the 2020 national targets. The renewables share per sector and type of source shall be maintained to provide investors with visibility over market growth. Indicative trajectories will allow the European Commission to monitor progress towards the EU-wide renewables target. National plans should outline measures to incentivise higher uptakes of renewables including support mechanisms, planned reinforcements of transmission and distribution infrastructure, and streamlining of administrative procedures.

National plans should be based on a standardised, binding template to ensure coherence and comparability between Member States contributions to the overall European target.

**5) Which elements/articles of the current planning obligations in the field of energy efficiency do you consider indispensable and why? Please, if relevant, refer to specific Articles of the [Energy Efficiency Directive](#) and [Energy Performance of Buildings Directive](#). (up to 1000 characters)**

The planning and reporting (P&R) provisions of the EED are linked, and it is difficult to refer to one without the other. Many of the deadlines for key EED planning provisions such as developing plans for the implementation of Art. 5 and 7, or providing relevant assessments under Art. 14 or 15, have already passed and from now on, MS have to report mainly on the progress of the implementation of the measures planned under the EED. Therefore, all the EED reporting requirements addressed through the NEEAPs should be kept and continue. Especially, for the EED provisions that are to be revised, such those under Art. 1, 3 and 7, the P&R requirements, as set currently in the EED, need to be safeguarded and improved, when being adjusted to the 2030 timeframe. All the different elements of what needs to go through a planning process and be reported upon, should be based on what is currently in the existing legislation and decided during the discussions on the revision of the latter.

**6) Which elements/articles of the current planning in the field of low-carbon development strategies do you consider indispensable and why? (up to 1000 characters)**

The EU and its Member States have committed and have clear obligations to develop low-carbon strategies, both under the Cancun Agreements and the Paris Agreement. The Paris Agreement clearly calls for net zero emissions in the second half of this century and it would from an equity perspective be consistent for all EU Member States to plan the full phase out of emissions by the middle of this century. Also, Article 4 of the MMR regulation stipulates that all Member States need to develop low-carbon strategies, and report on the status of their implementation by January 2015. As many Member States missed this deadline, reporting on the development and review of carbon phase out strategies should be ensured on a regular basis.

**7) Which elements/articles of the current planning obligations in the field of infrastructure development (like for example TEN-E) do you consider indispensable and why? (up to 1000 characters)**

MS should report planned investment in interconnections for a period of at least 5 years (Security of Electricity Supply Dir., Art. 7) and TSOs submit to National Regulatory Authorities (NRAs) a 10-year development plan (Electricity Dir., Art. 22) to provide long-term visibility on infrastructure needed to balance RES output on broader areas. DSOs should consider efficiency/DSR solutions to supplement the need to upgrade/replace network reinforcement from a system perspective (Electricity Dir., Art. 25), however not at the expense of increased and non-remunerated curtailment of RES. MS should also plan the deployment of smart grids alongside the necessary regulatory framework from NRAs. The PCI selection procedures (Reg. 347/2013) should be more transparent and include better safeguards to prevent PCI status going to projects damaging to the environment and incompatible with EU environmental acquis. Selection should be based on scenarios in line with EU climate and energy objectives.

**8) Which elements/articles of other existing planning obligations in the field of energy, including on security of supply, infrastructure and market integration do you consider indispensable and why? (up to 1000 characters)**

Overall adequacy of the electricity system to supply current and projected demands for electricity (Directive 2005/89 Security of electricity supply and infrastructure investment).

**9) Can you provide qualitative or quantitative evidence on the administrative burden on Member States and other stakeholders resulting from planning obligations at EU level? (up to 1000 characters; a possibility to upload further evidence is provided at the end of the questionnaire)**

While the compliance with the planning obligations around energy efficiency and RES legislation may need the deployment of resources at the national level, it does not appear that those can be considered excessive, or unnecessary, if compared to benefits. This is confirmed by different studies. E.g. the April 2015 mid-term evaluation of RES-D performed in the context of the REFIT programme concluded that the overall administrative burden and costs of planning and reporting obligations are reasonable, compared to the benefits.

It is also important to note that the majority of bureaucracy comes from areas like taxation and customs, not environmental policies, which are responsible for less than 1% of red tape in the EU, as found in the opinion from 2009 by the High Level Group on Administrative Burden (<http://www.eeb.org/index.cfm/news-events/news/commission-plans-to-reduce-red-tape-cross-a-red-line-for-democracy-and-the-environment/>).

***Future obligations***

**10) What level of importance do you attach to future planning obligations for Member States in the following key elements of the Energy Union Strategy?**

	Very important	Important	Less important	Not important	No opinion
Security of supply	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Internal Energy Market	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Energy infrastructure	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Energy efficiency	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Renewable energy	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
GHG emissions reduction (decarbonisation)	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Research, Innovation and competitiveness	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

## C. Evaluation of reporting obligations

### *Existing obligations*

In the energy and climate field there are a number reporting obligations for the Member States and for the Commission. These have been developed to cover specific elements of the Energy Union, with less focus on integrated planning and reporting. Both the Member States and the Commission have to abide to reporting obligations. Usually, the information collected through Member States' reports is used by the Commission to assess trends in the climate and energy sectors, assess progress towards certain policy objectives, to monitor implementation and to propose policy and legislative reforms. Importantly, there are several different types of reporting obligations. The following distinctions are useful for the purpose of evaluating them:

- Reporting obligations can be regular or irregular. The former are fulfilled periodically; the latter usually once or after a specific request.
- The content of the reporting obligations may be specified in EU legislation, but the level of detail varies from one sector to another.
- Templates used to respond to reporting obligations are sometimes compulsory. In other cases, they have a voluntary nature.
- Reporting obligations are set up according to the information needs of each area of the energy field linked to the specific requirement of the objective of the initiative. Only in some cases they are coordinated with reporting obligations in other areas.

### 11) How would you rate the following aspects of reporting obligations in EU legislation?

	Very important	Important	Less important	Not important	No opinion
Coherence of reporting formats among all EU Member States	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Possibility to monitor the performance and trends (and put in place corrective measures if the results are lagging behind)	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Effective and efficient implementation of EU legislation in the energy and climate field					
Assess progress to targets at Member State level and enable aggregation of data at EU level					
Better comparability of data from different Member States enabling an informed evaluation					
Increased certainty for investors across all EU Member States stimulating economic growth as well as research, innovation and competitiveness of the EU					
EU as a whole and Member States themselves are better informed on the actual performance and it provides ground for further action					

**If other, please explain: (up to 1000 characters)**

Reporting should allow policy makers and stakeholders to monitor both the implementation of policies and measures, and progress towards the fulfilment of the 2030 targets, so that further action is taken on time. Reporting templates should be mandatory and the information publicly available. The more detailed the reporting, the easier it is to see where MS deviate from their planning. Reporting should identify causes of delays in planning and permitting for all energy sectors and infrastructure, and conflicts arising with EU and international legislation for environmental protection and/or access to information and justice. The Commission should suggest improvements to national plans, procedures and institutional structures/capacities to enable more effective delivery, taking into account EU legislation and international agreements. Reporting is also important to assess progress in implementation of international obligations and commitments, e.g. low-carbon development strategies.

**12) Are you aware of overlaps or inconsistencies among the existing reporting obligations in the same or different areas of the energy acquis? Please provide examples. (up to 1000 characters)**

- The timing of the reporting obligations is not consistent - e.g. the Renewable Energy Directive, the Energy Efficiency Directive, the Effort-sharing Decision and the Monitoring Mechanism Regulation (and also the EEA and UNFCCC) all have different 'deadlines';
- The templates for the different plans are not all mandatory;
- The targets set are not all binding;
- At EU level, using different data and projections for different assessments.

For example:

- 1) the Commission's security of supply package from 16 February 2016 used a low 25% energy efficiency scenario for 2030 to assess Europe's gas import dependency and a higher 30% scenario for the heating and cooling strategy;
- 2) Grid planning by the ENTSOs and for PCIs uses a different set of energy supply and demand scenarios, creating inconsistencies such that grid planning is not optimised for the energy transition and creating the risk of over-investment in gas infrastructure.

**13) a) Which of the current reporting obligations could in your opinion be streamlined[\*] into one integrated report and why? (up to 1500 characters)**

See question 3.

**b) Are there reporting obligations that should be kept separate from the integrated report? (up to 1500 characters)**

**c) Are there reporting obligations that could be repealed? (up to 1500 characters)**

[\*] By streamlining we understand the possibility to integrate planning and reporting obligations resulting from different sectorial legislation by reducing possible duplication or gaps in the reporting and planning obligations, thereby ensuring transparency, coherence, relevance, efficiency and effectiveness of the reporting and planning. Furthermore planning and reporting cycles should be harmonised to the extent possible.

**14) Which elements/articles of the current reporting obligations in the field of renewable energy do you consider indispensable and why? Please, if relevant, refer to specific articles of the Renewable Energy Directive. (up to 1000 characters)**

Member States reporting on national renewable energy shares, support schemes, simplified administrative procedures, and transmission and distribution reinforcements as per Article 22 (1 a, b, c, e, f) should be maintained to provide a holistic overview of national policies and ensure transparency for investors. Biennial reporting will allow the European Commission to monitor collective progress towards the 27% target and will serve as an early-warning system giving way to corrective measures in case MS deviate from their pledges.

The European Commission's monitoring and reporting obligations as per Article 23 should be maintained. The Commission should be able to intervene in case of counter-productive measures and make official policy recommendations on national renewable energy policies.

The Commission should report biannually to Member States and the European Parliament as part of a reliable governance process and ensure transparency over collective progress.

**15) Which elements/articles of the current reporting obligations in the field of energy efficiency do you consider indispensable and why? Please, if relevant, refer to specific articles of the Energy Efficiency Directive, the Energy Performance of Buildings Directive and the legislation on products. (up to 1000 characters)**

See question 5.

**16) Which elements/articles of the current reporting in the field of low-carbon development strategies do you consider indispensable and why? (up to 1000 characters)**

See question 6.

**17) Which elements/articles of the current reporting obligations in the field of infrastructure development (like for example TEN-E) do you consider indispensable and why? (up to 1000 characters)**

See question 7.

**18) Which other reporting obligations in the field of energy, including on security of supply infrastructure and market integration, do you consider indispensable and why? (up to 1000 characters)**

See question 8.

**19) Which elements of the current reporting obligations in the field of energy research and innovation do you consider indispensable (investments in R&I, R&I funding programmes and projects and direct funding to institutions) and which information is publicly available or reported to other organisations? How can this reporting be made more consistent between Member States and more updated so that it can support more transnational cooperation in this field? (up to 1000 characters)**

**20) Can you provide qualitative or quantitative evidence on the administrative burden imposed by existing reporting obligations on both Member States and other stakeholders? (up to 1000 characters, a possibility to upload further evidence is provided at the end of the questionnaire)**

See question 9.

***Future obligations***

**21) Do you consider future reporting obligations for Member States in the following key elements of the Energy Union Strategy to be?**

	Very important	Important	Less important	Not important	No opinion
Security of supply	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Internal Energy Market	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
Energy infrastructure	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Energy efficiency	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Renewable energy	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
GHG emissions reduction (decarbonisation)	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Research, Innovation and competitiveness	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

**D. Options for streamlining planning and reporting obligations**

This part of the consultation seeks stakeholders' views on the options for the design of the planning and reporting obligations in the new governance system.

**22) Do you agree that a comprehensive new legislative act covering both planning and reporting obligations of policy areas related to the Energy Union including the 2030 Energy and Climate framework would ensure consistency and reduce unnecessary administrative burden?**

- ☐ YES
- ☐ NO
- ☒ No Opinion

**23) Do you think that non-legislative approaches (e.g. guidance to Member States) can assure effective and efficient streamlining of planning and reporting obligations and would provide the necessary certainty for investors?**

- ☐ YES
- ☒ NO
- ☐ No Opinion

**24) Concerning options to streamline planning and reporting obligations in the framework of the governance of the Energy Union, how would "Non-binding guidance for both planning and reporting obligations covering all Energy Union dimensions" influence the following categories?**

	Considerable Improvement	Improvement	No Change	Deterioration	Significant deterioration	No Opinion
Coherence of national plans and reporting formats among all EU Member States						
Effective and efficient implementation of EU legislation in the energy and climate field						

Achievement of the EU energy and climate objectives						
Possibility to monitor the performance and trends (and put in place corrective measures if the results are lagging behind)						
Increased certainty for investors across all EU Member States stimulating economic growth as well as research, innovation and competitiveness of the EU						

<p>Better implementation of international commitments by the EU as a whole and by Member States (e.g. concerning the reduction of greenhouse gas emissions)</p>						
<p>The Commission is better enabled to provide substantial and useful advice and ensure uniform application of EU legislation</p>						

**25) Concerning options to streamline planning and reporting obligations in the framework of the governance of the Energy Union, how would "Regulating planning and reporting obligations in sectorial legislation as currently the case" influence the following categories?**

	Considerable Improvement	Improvement	No Change	Deterioration	Significant deterioration	No Opinion
Coherence of national plans and reporting formats among all EU Member States	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Effective and efficient implementation of EU legislation in the energy and climate field	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Achievement of the EU energy and climate objectives	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Possibility to monitor the performance and trends (and put in place corrective measures if the results are lagging behind)						
Increased certainty for investors across all EU Member States stimulating economic growth as well as research, innovation and competitiveness of the EU						

<p>Better implementation of international commitments by the EU as a whole and by Member States (e.g. concerning the reduction of greenhouse gas emissions)</p>						
<p>The Commission is better enabled to provide substantial and useful advice and ensure uniform application of EU legislation</p>						

**26) Concerning options to streamline planning and reporting obligations in the framework of the governance of the Energy Union, how would "Regulating both planning and reporting obligations by a new comprehensive legislative act covering all Energy Union dimensions" influence the following categories?**

	Considerable Improvement	Improvement	No Change	Deterioration	Significant deterioration	No Opinion
Coherence of national plans and reporting formats among all EU Member States						
Effective and efficient implementation of EU legislation in the energy and climate field						

Achievement of the EU energy and climate objectives						
Possibility to monitor the performance and trends (and put in place corrective measures if the results are lagging behind)						
Increased certainty for investors across all EU Member States stimulating economic growth as well as research, innovation and competitiveness of the EU						

<p>Better implementation of international commitments by the EU as a whole and by Member States (e.g. concerning the reduction of greenhouse gas emissions)</p>						
<p>The Commission is better enabled to provide substantial and useful advice and ensure uniform application of EU legislation</p>						

**27) In your view, what should be the nature of the initiative to best streamline the planning and reporting obligations in the framework of the governance of the Energy Union?**

- ☐ Non-binding guidance for both planning and reporting obligations covering all Energy Union dimensions
- ☐ Regulating planning and reporting obligations in sectorial legislation as currently the case
- ☐ Regulating both planning and reporting obligations by a new comprehensive legislative act covering all Energy Union dimensions

If other, please elaborate: (up to 1000 characters)

The planning and reporting requirements included in the current directives need to be safeguarded and the revision of these requirements be based on what currently exists in the sectorial legislation.

**28) Please elaborate on the reasons justifying your choice in the previous question: (up to 1000 characters)**

The Planning and reporting (P&R) requirements included in the current directives need to be safeguarded and the revision of these requirements be based on what currently exists in sectorial legislation.

Any national integrated plan should ensure coherence and synergies between the different planning obligations, targets and assumptions, and give a general overview of the direction that each MS is willing to take to fulfil its medium and long term climate and energy targets. One needs to carefully ensure coherence between the revision of the specific directives, on the one hand, and the proposed P&R legislative instrument on the other hand, especially if the timing of both processes is different.

P&R obligations have to be regulated by legislation. Binding templates make planning and reporting easier, and more transparent and comparable. Therefore, the current system of sectorial legislation has to be improved to include binding templates for all energy-related files.

## E. Options for the governance system of the Energy Union and its process

### *E.1 Scope and nature of the integrated national climate and energy plans*

National plans should take a holistic approach and address the five dimensions of the Energy Union in an integrated way recognising the interactions between different dimensions. The nation plans should cover the period from 2021 to 2030 and build upon what each Member State should deliver in relation to their policies for 2020 and also include a perspective until 2050. These national plans should provide long term predictability and certainty for investment and ensure greater cooperation and coherence among Member States' approaches on climate and energy policies.

#### **29) Notwithstanding the fact that all five dimensions will be part of the National Energy and Climate plans, which elements of the Energy Union Strategy should be given prominence?**

	Very important	Important	Less important	Not important	No opinion
Security of supply	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Internal Energy Market	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Energy infrastructure	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Energy efficiency	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Renewable energy	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
GHG emissions reduction (decarbonisation)	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Research, Innovation and competitiveness	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

**30) a) Building further on your replies to the sections devoted to the existing planning and reporting obligations (questions 1-21), which of the areas/articles subject to current planning obligations should be included in the integrated National Energy and Climate Plans? Please explain. (up to 1500 characters)**

See questions 4-8.

**b) Building further on your replies to the sections devoted to the existing planning and reporting obligations (questions 1-21), which of the areas/articles subject to current reporting obligations should also be included in the integrated National Energy and Climate Plans? Please explain. (up to 1500 characters)**

See questions 14-19

**c) Are there current planning obligations that should continue to be treated separately? (up to 1500 characters)**

**31) What political process would be necessary to ensure the stability of the National Energy and Climate Plans (e.g. approval by national governments, cross-party approval, approval by national parliaments, or national legislative acts)? (up to 1000 characters)**

A transparent and participatory planning process to engage relevant stakeholders, such as cities, municipalities and citizens at an early stage will be crucial to create investor confidence and public acceptance, and therefore the stability of the plans.

Templates have to be binding, with sufficient level of details/info. Action for achieving the three 2030 headline targets (energy efficiency, RES and GHG) has to be prioritised in the templates compared to other Energy Union dimensions without targets.

A concrete timeline has to be provided for finalising the first plans well ahead of 2020. A regular update of plans has to be foreseen, to take stock of progress, taking also into account the reporting cycles under the Paris agreement.

MS should report biennially to the Commission, and the latter biennially to the Council and EP to reinforce Commission oversight over national progress, and ensure transparency and accountability over collective progress towards the headline targets.

**32) What, in your opinion, would be the main factors that could justify an update of the National Energy and Climate Plans in the period from 2021 to 2030 (e.g. energy market developments, economic changes, evolving EU legislation, or collective progress made towards the Energy Union objectives)? (up to 1000 characters)**

Plans should be updated in case MS and/or the EU as a whole are not in line with targets - bearing in mind that ambition can obviously only be revised upwards. The Commission should have a reinforced oversight over MS progress and the ability to make country-specific recommendations at every biennial reporting cycle in order to address challenges in meeting national objectives. The introduction of further measures, in case a gap towards achieving the 2030 targets is identified, needs to be foreseen.

***E.2 Role of different institutions in the governance process***

**33) How relevant would you rate the role of different institutions in the development of integrated National Energy and Climate Plans?**

	Very relevant	Relevant	Less relevant	Not relevant	No opinion
European Commission	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
European Parliament	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
European Council	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Energy Council	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Environment Council	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
National administration	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
National parliaments	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
National stakeholders	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Neighbouring or other group of Member States	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Regional fora	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

**34) How relevant would you rate the role of different institutions in the monitoring of the implementation of integrated National Energy and Climate Plans**

	Very relevant	Relevant	Less relevant	Not relevant	No opinion
European Commission	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
European Parliament	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
European Council	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Energy Council	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Environment Council	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
National administration	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
National parliaments	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
National stakeholders	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Neighbouring or other group of Member States	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Regional fora	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

**35) With respect to the National Energy and Climate Plans, what should be the role of the European Commission in order to ensure the achievement of the Energy Union's objectives?**

	Very relevant	Relevant	Less relevant	Not relevant	No opinion
Support to Member States in developing national plans, notably by providing templates and technical support and disseminating best practice	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Review national plans and analyse Member States' contributions	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Issue policy recommendations, notably in its annual State of the Energy Union	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Approve national plans	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Propose measures on EU level in view of delivering on the objectives of the Energy Union	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

***E.3 Regional cooperation to establish, and peer review before finalisation of, integrated climate and energy plans***

**36) In accordance with the conclusions of October 2014 and March 2015 European Councils, the new governance system should facilitate the coordination of national energy policies and foster regional cooperation. How important would you rate regional cooperation in the course of integrated climate and energy plans?**

	Very important	Important	Less important	Not important	No opinion
As part of their national integrated plans Member States should jointly develop regional objectives, standards and common coherent strategies on the relevant dimensions of the Energy Union.	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
The national plans should describe how they reflect regional integration and cooperation on the Energy Union domains.	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Member States should consult relevant other Member States on national plans before their submission.	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
The plans should provide clear account of these consultations and how they are incorporated in the plans.	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
The Commission should guide the process, and develop appropriate fora for consultations of draft plans and regional cooperation where required.	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

**37) Concerning consultations and mutual reviews of the integrated National Energy and Climate Plans (meaning that plans or progress reports of one Member State being reviewed by other Member States), how important would you rate the following options?**

	Very important	Important	Less important	Not important	No opinion
Only consultations should take place in the preparation of the plans leading to the draft plans	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Mutual reviews should be done on draft plans	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Mutual reviews should be also used for progress reports assessing the implementation of plans	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Mutual reviews should be of voluntary nature for Member States	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Mutual reviews should be mandatory for Member States	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
A dedicated system of mutual reviews should be established including the creation of adequate fora	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
