

GIE views on Gas Target Model

Jean-Claude Depail

GIE President

Madrid Forum XX

Madrid, 27 September 2011

Key Messages

Gas Target Model should propose measures that :

- Keep attractiveness of EU gas market and ensure security of supply
- Provide clear market-based investment signals
- Allow for short-term optimisation on top of long-term gas supply
- Ensure that benefits exceed costs
- Pursue technical harmonisation

GTM is a useful tool to shape a robust gas market

- Focus on transmission; Detrimental impact on competitive activities of storage and LNG should be avoided
- Short-term optimisation on top of long-term gas supply
- Need for sound Impact Assessment and Cost-Benefit Analysis
- Current EU processes for transmission on CAM, CMP and Balancing should provide the right starting point
- GTM should properly take into account the integration of renewable energy sources

Thank you for your attention
