Outline

- 1. REMdb data and system administration
- 2. REM Data Submission Tool training courses
- 3. Annual Monitoring Reports
- 4. Summary of the Euratom Art 36 data submissions

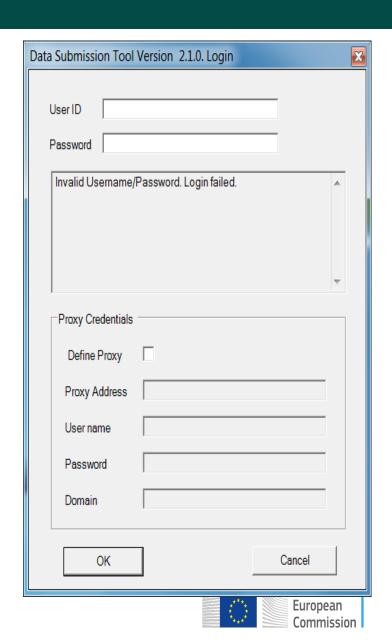

- Application Development & Maintenance
- Application Support
- Data Maintenance & Analysis

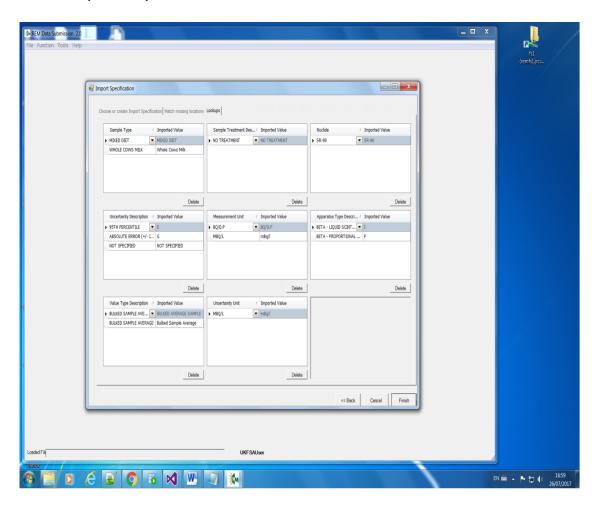

Upgrading Data Submission Tool from version 2.0 to 2.1

Some of the major changes in this version include:

- Handling login error
 - Error was not handled at login
 - The user had access to some data
 - The message was ambiguous and confusing
- Solution
 - User is denied access
 - A clear error message is issued

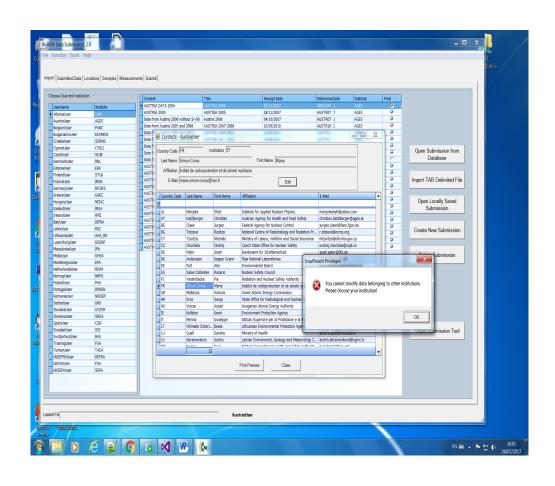

The Import Specification Wizard has been extended to include Uncertainty Units

Member State users now have the possibility of modifying their contact information while maintaining read-only privilege on information related to other users.

Migration of DST from VS 13 to VS 15 and from Oracle 10g to Oracle 12c

Why Migrate

- To keep up with technology trends;
- To take advantage of latest improvements.

Challenges

- Libraries and packages need to be replaced (manually);
- Code fragments need to be reviewed and adapted;
- The entire software needs to be recompiled and tested.

This is an an-going iterative process until the system has become stable

Application Support

What?

- Respond to user requests; provide technical support
- Track, analyse, troubleshoot and resolve issues raised by users;

Why?

- Diverse user community different backgrounds and different levels of computer literacy;
- Dynamic user group frequent role changes: People move from data submission to other roles and new people come in to handle data submission
- Not all users find time to attend training courses

Data Maintenance & Analysis

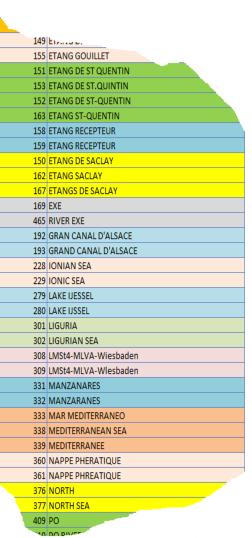

These activities concern cleaning, validating and ensuring the long-term quality of data in REM database.

Catchments

The problem in this case is duplication.

- In some cases the same physical catchment was named slightly differently and each name was assigned a different code
- In other cases, the same catchment name was repeated and each repetition had a different code (ID).

The software identifies catchments by their identifiers (IDs). Results are bound to be inaccurate, inconsistent and incorrect.

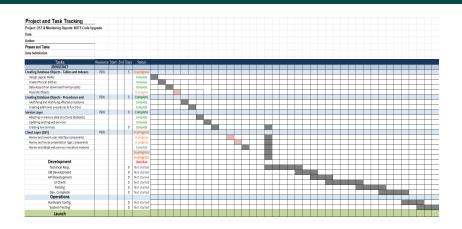

NUTS Codes

Migrating the custom (legacy) codes in REM database to standard EUROSTAT NUTS cods.

Macro activities:

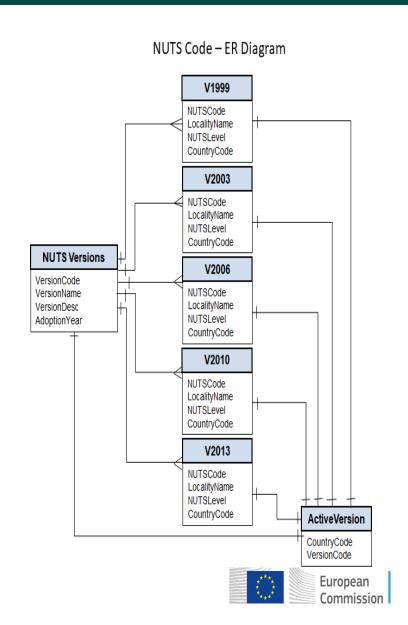

- Acquisition of new codes.
- Mapping and verification with stakeholders
- Modifying DB Structure
- Monitoring Reports
- Updating historical data

State of the art:

- Mapping has been completed for practically all member states.
- Data for Belgium has been verified and validated because it was intended to get Belgium involved in the beta test.
- All required database objects have been created.

Data are submitted by the Member States directly into REMdb using a tool developed and maintained by JRC: **REMdb Submission Tool**.

JRC organizes and hosts on a yearly basis a training course on the Data Submission tool, explaining its usage and giving practical examples.

Each participants is given a PC loaded with a copy of the Submission Tool.

Each participants is asked to bring a sample copy of their own datasets in order to practice with.

Feedback provided at the end of the training poses the basis for the next one.

The objectives are that, after attending the course, participants should:

- have an overview of the REM activities and routine monitoring of environmental radioactivity levels in Europe;
- know how to submit data through the REM DST;
- know how to check compliance and quality or their data using the REM DST;
- know how their data are being compiled, collated and checked by the JRC;
- know how their data are being reported to the European Community through a series of annual monitoring reports on environmental radioactivity levels published by the EC.

REMdb Submission Tool

What it is used for

Who are the users

How the data are used

Submitting environmental radioactivity data to the REM Database.

Researchers/laboratories of EU and non-EU Member States who submit the data.

The tool allows viewing, updating, and extensively searching data.

Compilations of the information received from the Member States are published by the Commission as a series of annual monitoring reports and available for on-line browsing.

13-14 December **2016**9 participants from 7 countries

REMdb submission tool v2.0

26-27 September **2017** 8 participants from BG, ES, GR, IE, LT, PL & RO

REMdb submission tool v2.1

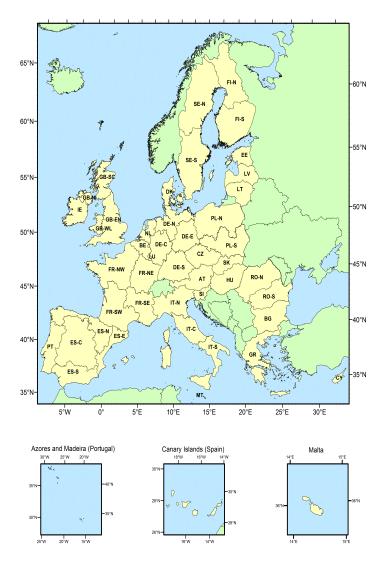

13-14 November **2018** 8 participants from 8 countries

- REMdb submission tool v2.1

RL : reporting level for 137Cs in air, i.e. 3.0 E-02 Bq m⁻³ (see Appendix B)

N : number of measurements considered in calculating the annual concentration.

L : number of sampling locations considered in calculating the annual concentration.

M : maximum monthly average in the year.

M : month during which the maximum occurred.

Annual Monitoring Reports: sparse network ex.

Annual Monitoring Reports: Next

- More automated report production developed:
 - MR 2012-2014 (incl. Croatia)
 - MR 2015-2016
- Review of layout of future reports:
 - content (sample type/nuclides, networks)
 - Data representation
