

SYSTEM OPERATION: FROM COORDINATION TOWARDS ULTIMATE INTEGRATION

Start with common
service providers
executing certain
system operation tasks
on behalf of TSOs

Assess whether service
providers can be directly
responsible for those
tasks

Introduce legislative
changes to allow for this
transfer of responsibility
from national to regional
level

DEVELOP INTEGRATED REGIONAL SYSTEM OPERATORS

EURELECTRIC fully supports the Commission's proposal for regional coordinators:

- Go beyond current coordination – ensure regional decision making
- Single operational framework
- Ensure geographical consistency

KEY TASKS

Integrated congestion management: do not discriminate between internal and cross-border trade (same conditions and speed)

Common rules and products for procurement of balancing and ancillary services and dispatching

Regional system adequacy assessments

Regional network investment planning and coordination of network investment decisions
