

Find attached reply by ANPIER to the consultation on the Green Paper on the 2030 Framework for Climate Energy.

ANPIER is the National Association of Producers and Investors of Photovoltaic Energy in Spain, is a nonprofit organization, to represent and defend the interests of producers and investors in solar PV. ANPIER is the most representative association of Spanish PV sector, bringing together over 4,000 members.

ANPIER was born in response to hardline retrospective government policies in the photovoltaic sector of Spain. Since 2010 the association has grown both in number of associates and power capacity representation. Bringing together a diversity of associates, from small PV photovoltaic producers to international investor firms with PV assets in Spain.

We fully back the reply by EREF(attached on this e-mail). ANPIER wants to emphasize that changes in policy instruments (4.3) at the EU level are especially necessary as to revert recent retrospective changes on Spanish PV support schemes, which are already causing the bankruptcy of many photovoltaic energy producers in Spain.

All my best,
