Appendix(ces)

Introduction

In accordance with Article 4(3) of the Directive on the promotion of the use of energy from renewable sources (2009/28/EC) we hereby enclose the forecast document from the Netherlands.

Forecasts

Estimated demand¹

The Dutch sub-objective as laid down in Directive 2009/28/EC² is ambitious. The Netherlands will attempt to achieve the objective by using adequate domestic sustainable energy production. Consequently the Netherlands does not currently expect to use production from other EU countries in order to achieve the objectives laid down in the Directive. In the unlikely event that less renewable energy is produced than stated in the indicative trajectory contained in Annex 2 of this Directive, temporary efforts will be made to intensify the policy on the basis of energy production in the Netherlands.

Estimated excess production³

Currently it is not being assumed with regard to the Dutch national objective for 2020 that there will be excess sustainable energy production. It is not expected that a statistical transfer to other European countries will be required.

Estimated potential for joint projects⁴

There is currently no policy regarding joint projects, although the Netherlands is open to proposals and ideas from other Member States. The priority of the policy in coming years is to build up national renewable energy capacities, partly in connection with achieving the (higher) national renewable energy target.

Table

This table shows the estimated national excess and deficit in renewable energy in the same format as table 9 based on the model for national action plans for energy from renewable sources.

	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020
Estimated excess in forecast document	0	0	0	0	0	0	0	0	0	0	0

¹ Estimated demand for energy from renewable sources to be satisfied by means other than domestic production until 2020.

² The Dutch objective for renewable energy in 2020 is 20% of primary energy use. For the cabinet objectives see 'New Energy for Climate, Cleanliness and Efficiency Work Programme, September 2007'.

³ Estimated excess production of energy from renewable sources compared to the indicative trajectory which could be transferred to other Member States.

⁴ Estimated potential for joint projects to 2020.

Estimated deficit in forecast document	0	0	0	0	0	0	0	0	0	0	0
---	---	---	---	---	---	---	---	---	---	---	---

Estimated excess and/or deficit production of renewable energy compared to the indicative trajectory that can be transferred to/from other Member States in [Member State](ktoe)

Conclusion

We assume that we have completed this in accordance with Article 4(3) of the Directive. We would be grateful for your confirmation of this.
