

## 2. Transparency requirements (1)

- **Transparent information on daily available capacities and long term forecasts is essential for**
  - a real gas market opening
  - programming new investments and gas contracts
- **EURELECTRIC supports the principle not to sign contracts limiting capacity publication for confidentiality reasons**
- **Current system of traffic lights clearly insufficient**
- **Most cross-border points in GTE map have red color while the Brattle report says:**
  - “ the extent of cross-border physical congestion is currently limited in the European transmission system”

## Transparency requirements (2)

- Requirements should also include storage and LNG terminals, as is expected from the title
- Non-discriminatory access to storage for modulation or for commercial use is economically important
- Tariffs, access conditions and available capacity for storage should be published and under the supervision of the regulator
