### Flow based capacity allocation in Europe

- No more NTC:s to set the commercial flow limits but flows in critical network branches.
- Central Western Europe and Central Eastern Europe are developing their own projects.
- Germany is the dividing line.

## Loop flows

## Conclusions

- 2014 is there very soon.
- Flow based market coupling is the target model.
- In flow based capacity allocation focus moves from NTC:s to sharing of congestion rents.
- It seems that there can not be several flow based capacity allocation systems in Central Europe including the Italian borders.
