

Eva Hoos, ENER C1 17 October 2019 Eastern Partnership: EU
Promotion of
Renewables in Heating &
Cooling

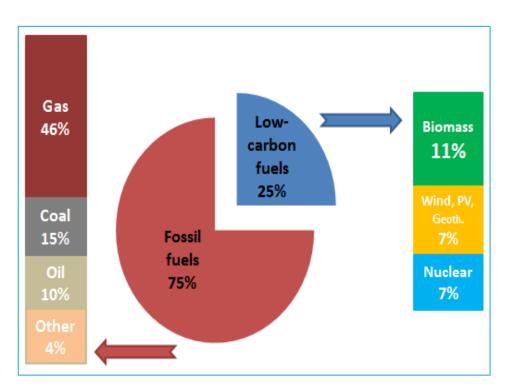

Heating and cooling is 50% of EU's final energy consumption

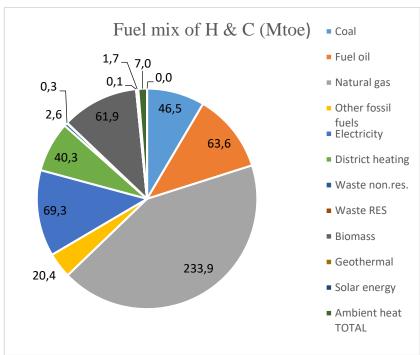

Buildings consumes ≈ 60% of heating and cooling, industry consumes most of the rest

Most of it is fossil fuel

Used inefficiently in buildings ... also in industry

Fabric heat loss: 200 W/°C Ventilation heat loss: 50 W/°C Total heat loss: 250 W/°C

Heating demand: 10,000 kWh/yr Insulate walls, roof and floor Better windows and doors

Fabric heat loss: 85 W/°C Ventilation heat loss: 50 W/°C Total heat loss: 135 W/°C

Heating demand: 6,000 kWh/yr

Reduce draughts and air leakage

Fabric heat loss: 85 W/°C Ventilation heat loss: 35 W/°C Total heat loss: 120 W/°C

Heating demand: 5,000 kWh/yr

Better controls and lower internal temperatures

Fabric heat loss: 85 W/°C Ventilation heat loss: 35 W/°C Total heat loss: 120 W/°C

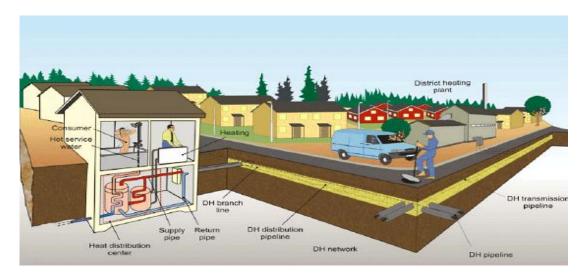

Heating demand: 4,000 kWh/yr

Produced in heating appliances (\approx 90%) and in district systems (\approx 10%) ... many of which are old and inefficient ...

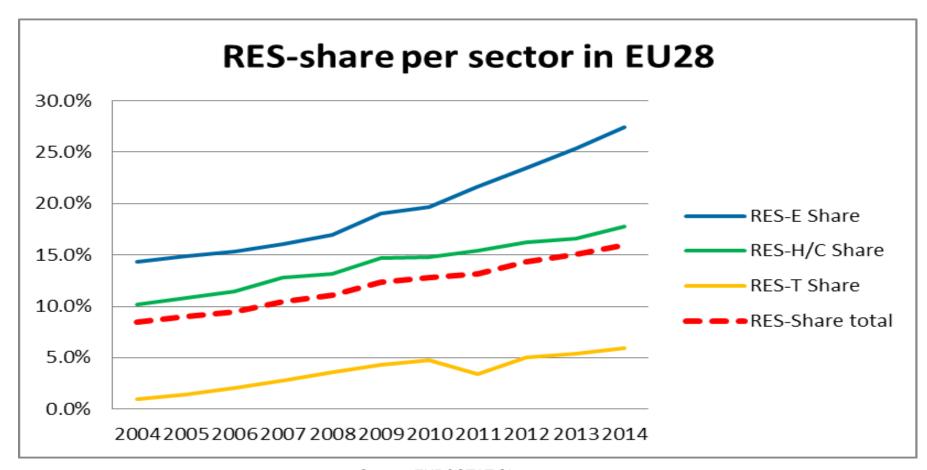

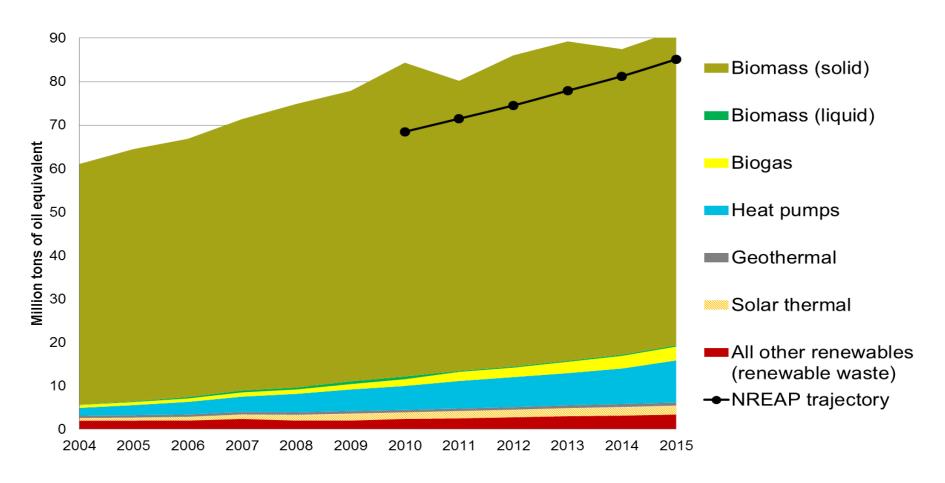

STATE OF PLAY of RES - PROGRESS BY SECTORS

Key factors (1)

- Buildings: in focus because they are the largest energy users with high unused potentials for energy efficiency and renewable energy
- To achieve our decarbonisation objectives, buildings must be decarbonized.
- Building renovation: a key opportunity to reduce energy needs and replace old heating systems with efficient and renewable ones
- Cooling: is growing and mostly electric and inefficient

Key factors (2)

- Industry: still has potentials and can do a lot more for energy efficiency and renewable energy
- Utilise better waste heat and waste cold; there are potentials
- Link heating with electricity for flexibility and to integrate more renewables in both heating and electricity

Key factors (3)

- District heating and district cooling can be a tool for energy efficiency, renewable energy and flexibility
- Combined generation of heat and power remains one of the best ways to improve generation efficiency, help renewables and link heating with electricity for flexibility
- Thermal energy storage is an enabler of flexibility, renewable energy and energy efficiency
- Smart systems (building automation and control, heating appliances and networks) are enablers of energy efficiency, active consumers, demand response

Key factors (4)

- Comprehensive approach to energy efficiency and renewable energy to reduce the energy needs of buildings, speed up the replacement of obsolete fossil fuel boilers with efficient renewable heating and increasing the deployment of renewable energy in district heating and CHP;
- Supporting local authorities in preparing strategies for the promotion of renewable heating and cooling
- Support for innovation
- Supporting business case and financing

Generic Barriers

- Information, knowledge, expertise,
- Trained professionals
- Business models and case
- Regulatory frameworks
- Financing: high up-front investment costs (high CAPEX, low OPEX)
- Administrative capacity for integrated approach to strategies, policies and energy planning
- Split incentives
- Data and statistics

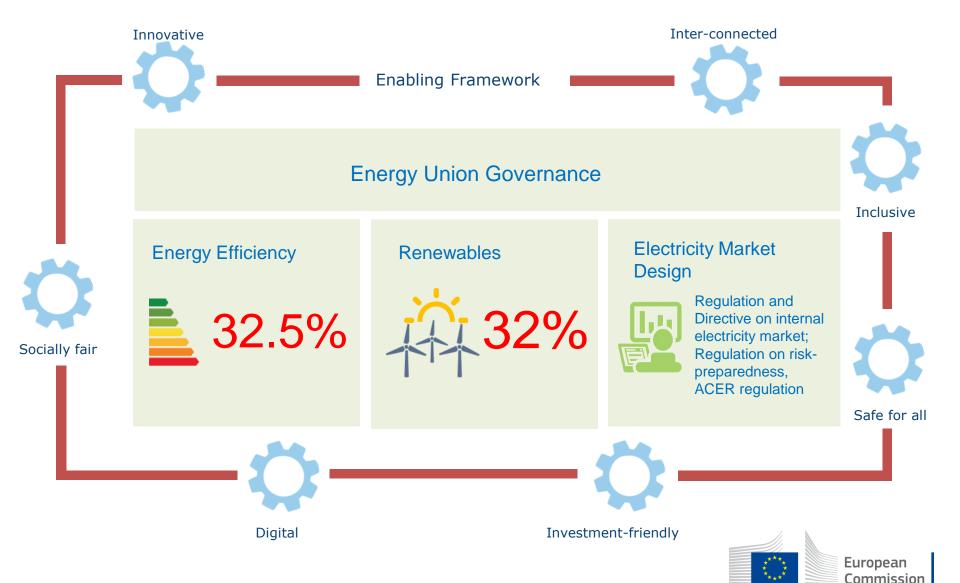

Key elements for Heating & Cooling

- ☐ Energy Efficiency → Energy efficiency 1st
- Renewable Energy → #1 in Renewables
- Flexibility → sector coupling with electricity systems
 - Intelligent H&C
 - Storage
- □ Consumer focus
 - → Renewable self-consumption
 - → Renewable energy communities
- □ Innovation, R&D
- □ RES & low-carbon gaseous & liquids fuels → sector coupling (emerging)

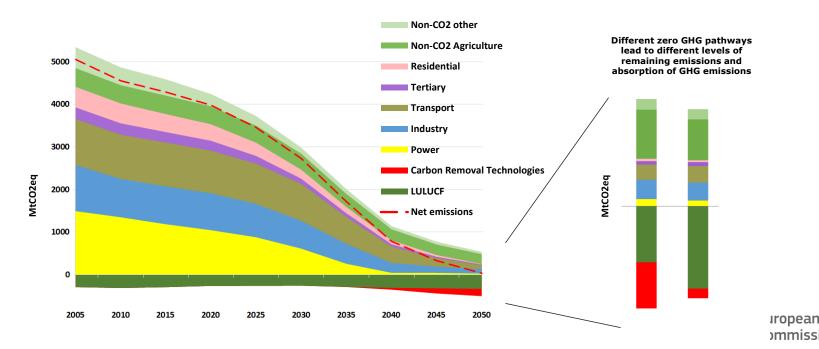

Clean Energy Package: 2030

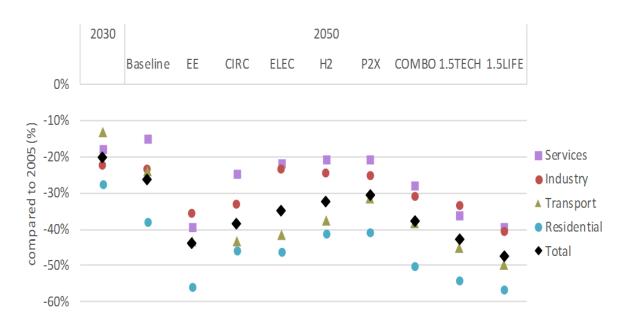

+ 2050 Perspective: Long Term Strategy

- EU leads in clean energy transition and GHG emissions reduction. Ambitious 2030 targets. 60% reductions in 2050 with current policies not in line with the Paris Agreement.
- Radical transformations necessary: central role of energy system, buildings, transport, industry, agriculture.
- There are a number of pathways for achieving a climate neutral EU, challenging but feasible from a technological, economic, environmental and social perspective.

Changes in final energy consumption (2050 compared to 2005)

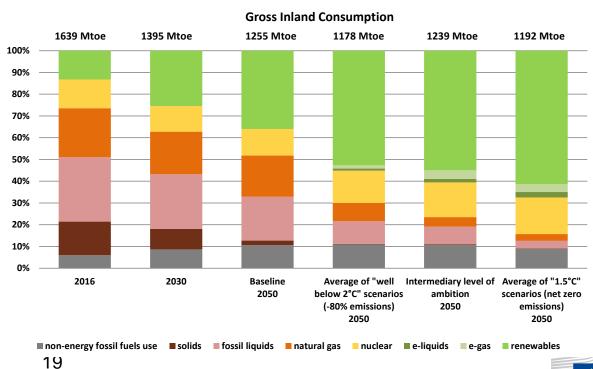

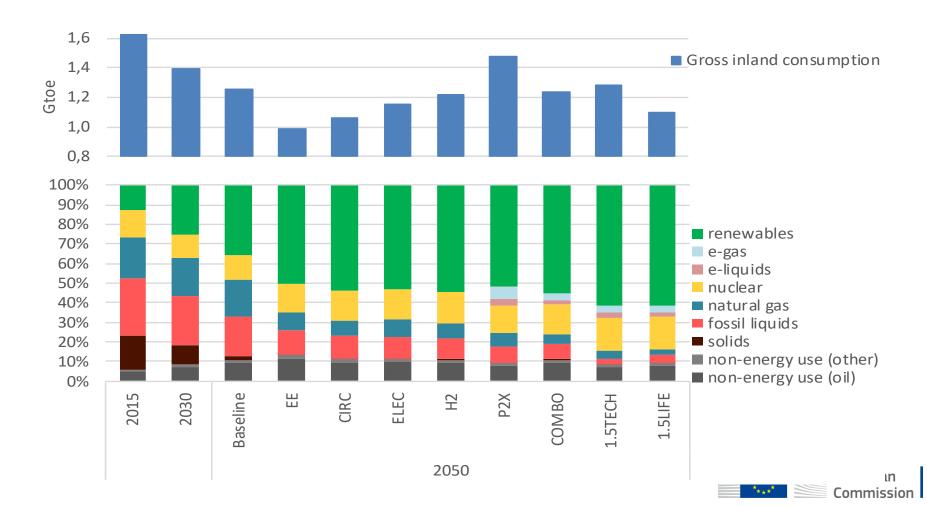

Deployment of renewables

Primary energy in 2050 largely coming from renewable sources

- ► > 60% of all energy produced from renewables
- > 80% of electricity produced by renewables
- energy efficiency (final energy) key in all scenarios
- EUR 2-3 trillion of energy import savings (2030-2050)

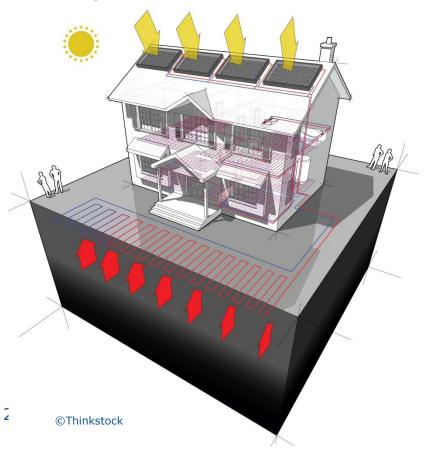

New Renewable Energy Directive 2018/2001/EU

Regional Policy

ADDRESSING THE UNTAPPED POTENTIAL OF HEATING & COOLING

➤ Target to increase renewables in heating and cooling by 1.3 percent point per year (2020-2030):

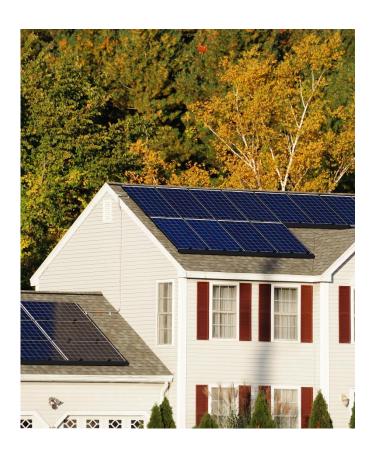

- Flexibilities: high RES MS, high natural gas or cooling shares, dispersed settlement structures, 40% allowance for waste heat/cold
- Illustrative list of measures leaving flexibility for Member States and accessibility

District heating and cooling

- 1 ppt increase in renewables and waste heat/cold
- Third Party Access for suppliers of renewables and waste heat/cold
- Right to disconnect from inefficient networks for consumers
- Right to be informed for consumers on renewables share and energy performance

TOWARDS A DECENTRALISED ENERGY SYSTEM

- REDII will empower citizens and local actors to be active in the energy transition
- Objectives:
 - mobilise private capital
 - increase local acceptance
- For the first time, a definition and a new legal regime for renewable selfconsumption and for renewable energy communities
- Facilitate uptake of long-term power purchase agreements (PPAs)

BIOENERGY SUSTAINABILITY

- > Reinforced EU bioenergy sustainability criteria:
 - Enhanced synergies with the circular economy (e.g. waste hierarchy principles)
 - EU criteria extended to cover biomass for heat/cooling and power
 - New risk-based criteria for forest biomass (ensuring sustainable harvesting & proper LULUCF accounting)
 - Higher GHG emission saving targets
- New energy efficiency criteria for large-scale biopower
- Enhanced EU and national verification of the implementation of the sustainability criteria
- > Full EU harmonization for biofuels, partial harmonization for biomass in heat & power
