

Agenda item 2

Regional initiatives – Facts

- All positive developments made through Regional Initiatives up till now. Coordinated developments and good cooperation between PEXs and TSOs will remain central to build internal market infrastructures
- Many maturity steps were reached and substantial developments are now to be delivered, especially for DA and ID
- Delays in project developments seem well balanced between normal checks (extendability and robustness: healthy approach), and internal difficulties between Project Partners (both between TSOs & between PEX),
- Very little involvement of Market Participants to solve these conflicts and insufficient consideration for « time to market » and reality check on markets

Agenda item 2

Regional initiatives – what to do?

- The Top-Down Network Code process will remain lengthy and can only achieve part of the Target (minimal harmonisation process, with exceptions)
 - More than ever, the Internal Market efficiency will depend on Project Partners' ability to respect each others and their respective Roles and to engage efficiently and authentically with market participants
- 👉 **Anticipate the definition and the setting up of Stakeholder Committees and ensure that their composition will put the Internal Market and its overall efficiency at the center of the development process**
- => more power for Market Participants, Regulators and ACER and healthy separation of Roles and responsibilities between PEX and TSOs**
-
