THE PROCESS

FINANCING ENERGY EFFICIENCY

THE PROBLEM

We have money,
but cannot find
“good” projects!

“Investement”

Capacity Building
Green Rating Tool
Pipeline of EPC
Projects

We have “good”
projects, but we
are looking for
money!

“Sustainable energy project”

Adapted from C. MILIN, ECEEE 2013

EPC PROJECTS

KEY BARRIERS

- **Financing:** In most cases, the credit worthiness of the customer is the key issue, but also credit worthiness of the EPC provider can play a role
- **Risk assessment:** apart from the credit risk, also performance and equipment risks need to be taken account by the investors
- **Lack of track record:** the relative absence of (numerous) successful cases may cause lack of confidence on the investor side

- **Decision making:** Complex decision making procedures may delay contract start
- **Rejection of energy saving measures:** Management and staff may reject some of the proposed measures, due to standard business operation and safety concerns.
- **Administrative hurdles:** especially if civil works are involved

EPC PROJECTS

KEY DRIVERS

- **Standardisation:** the energy efficiency investment process, from the definition of the energy saving measures onwards, should be standardised
- **Robust baselining:** the definition of the initial energy consumption situation is key to a correct estimation of savings and financial returns
- **Insurances:** Insurance products are available to cover the equipment risk and also (recently) project performance risks
- **Reduction of transaction costs:** the reduction of all the costs involved in the preparation and assessment of an investment opportunity is key to untapping the investment potential

- **Clear business case:** the customer needs to understand all the benefits of the proposed energy saving measures (beyond the mere energy dimension) in order to facilitate decision making and mitigate rejection
- **Clear contractual arrangements:** Roles/responsibilities of each project stakeholder, validation of savings, sharing of financial benefits, performance guarantees, prices and termination cases need all be accounted for.

TRUST EPC SOUTH OVERVIEW OF THE PROJECT

The Project started in 2015 within the European Commission's Horizon 2020 programme
– *Finance for Sustainable Energy*

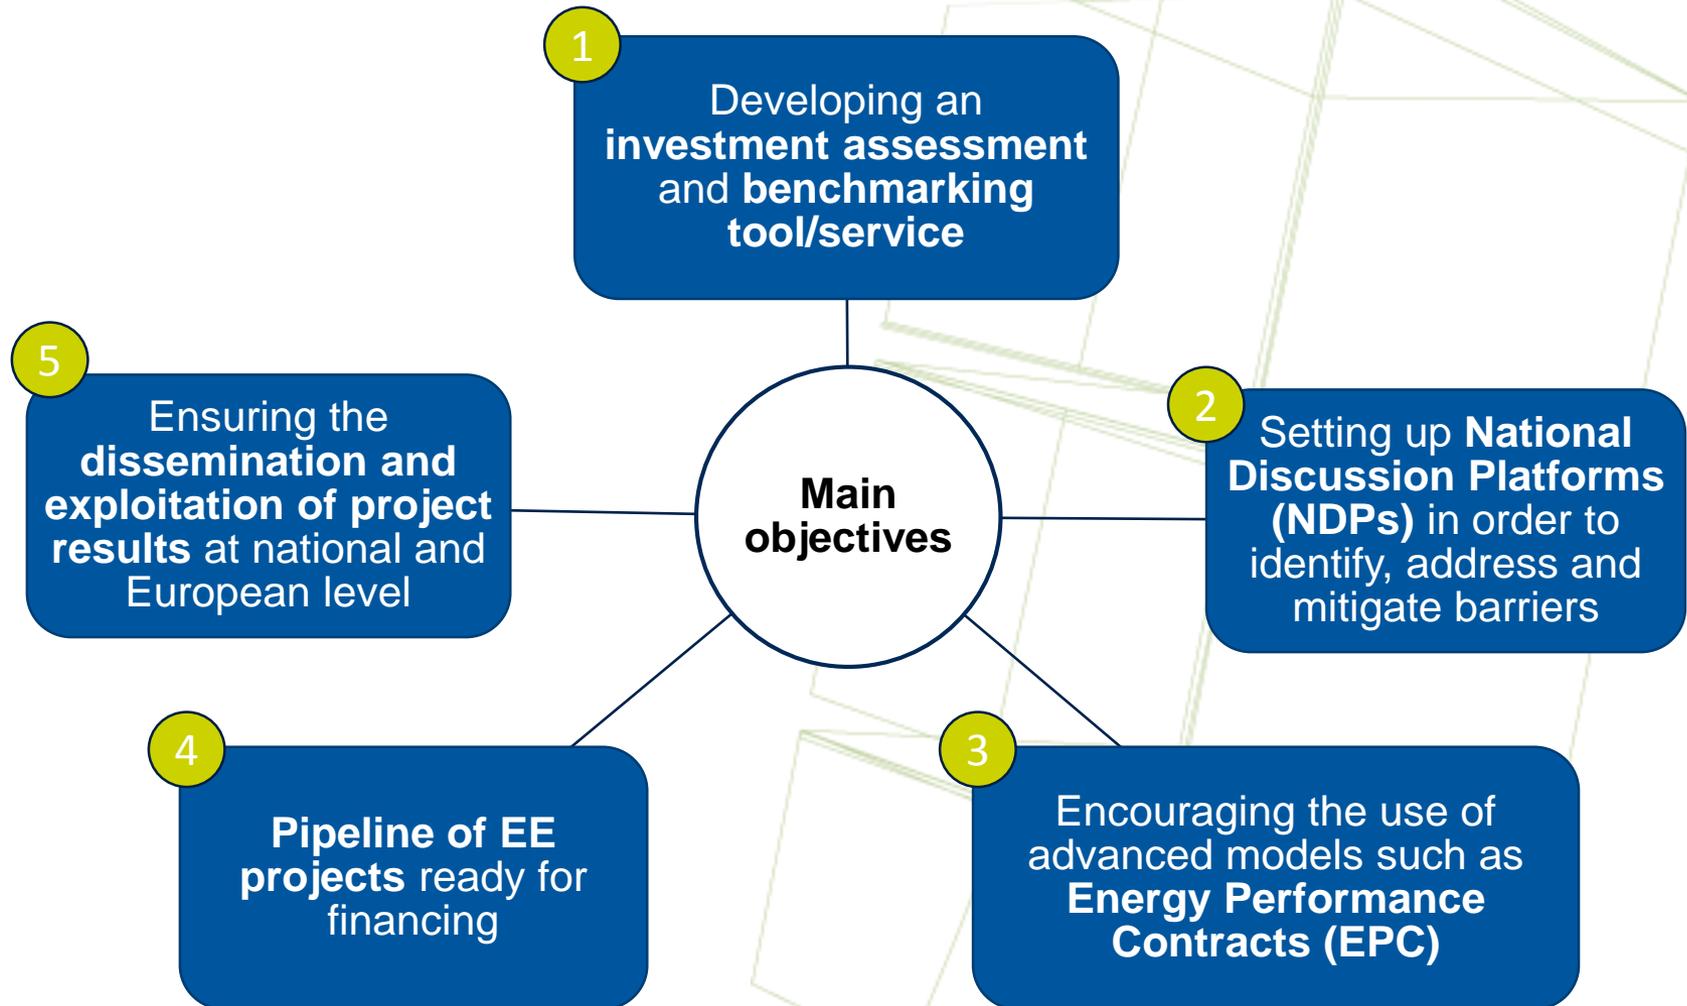

10 diverse European Partners from 6 southern European countries

3 years of duration, until February 2018, with a budget of nearly 2M Euros

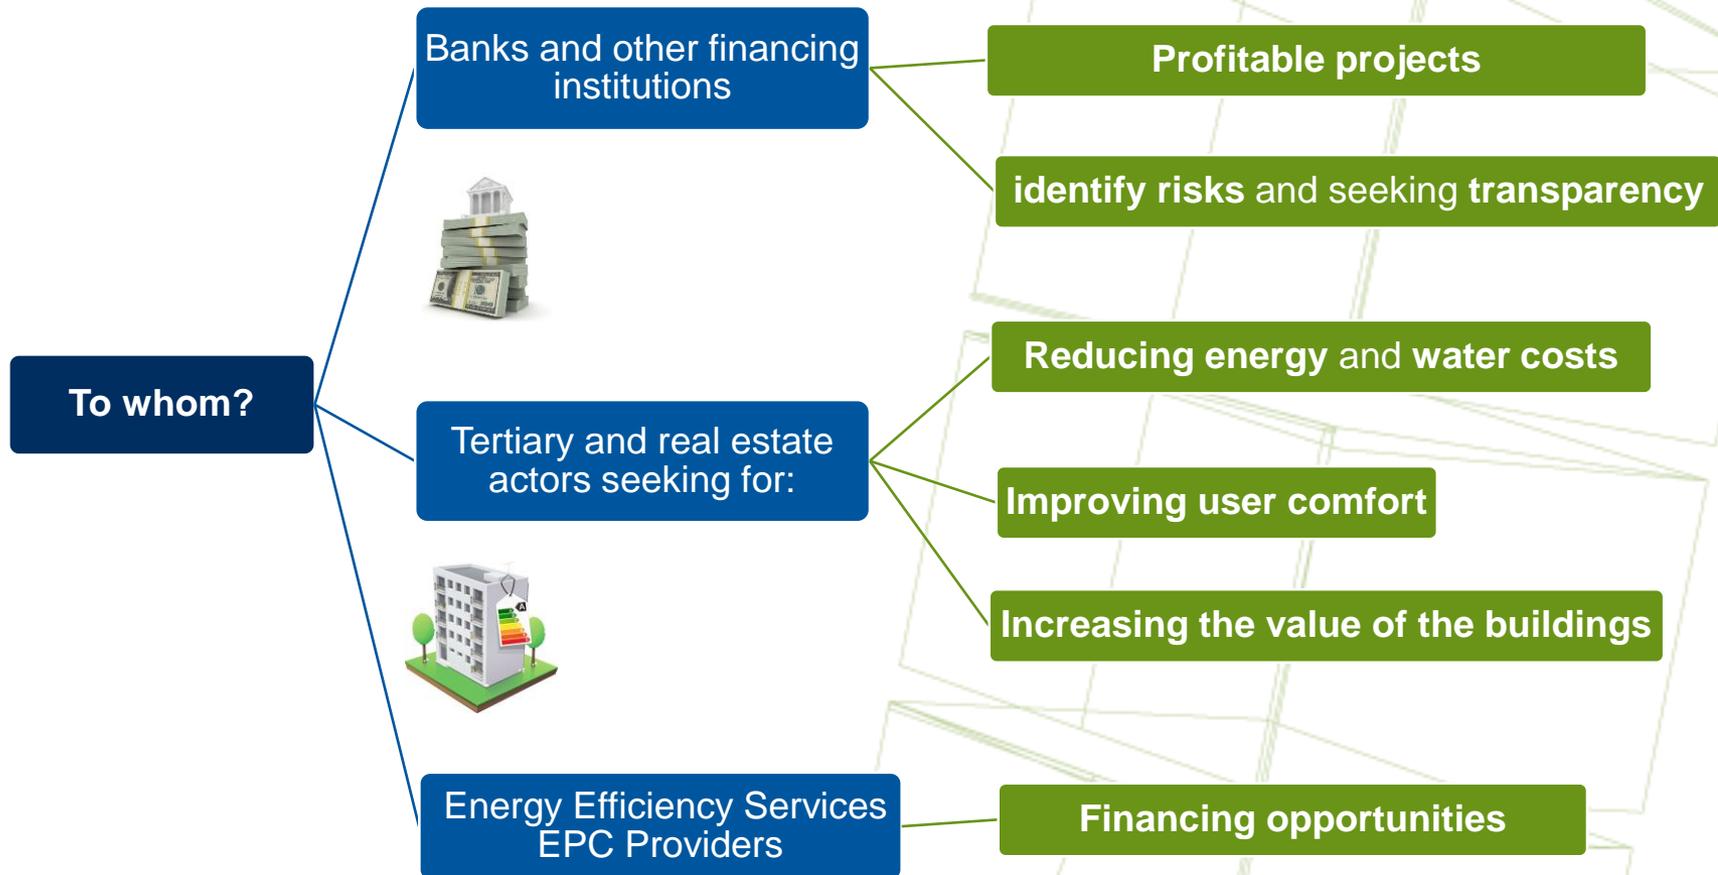

TRUST EPC SOUTH

PROJECT OBJECTIVES

TRUST EPC SOUTH

TARGET GROUPS

TRUST EPC SOUTH

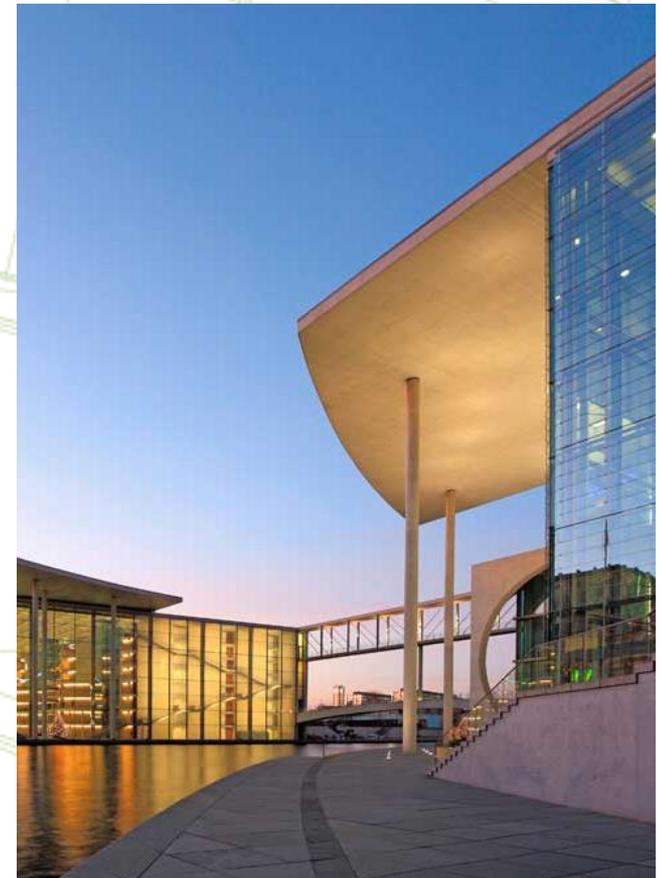

OUR OFFER

TRUST EPC SOUTH

PROJECTS PIPELINE

- **Identification of projects**
 - Hospitality, Office buildings, Health, Education & Sport centres, and Retail
 - Total energy consumption higher than 0.5 GWh/year
 - Total useful floor area larger than 2,000 sqm
 - Investment of at least 200 k€
 - Primary energy savings of at least 15-20%
 - Combination of different EE/SE measures
- **Green Rating EPC assessment tool application:**
 - Preliminary Energy Audit
 - Identification of most profitable measures
 - Estimation of Investment
- **(Identification of EPC provider if needed)**
- **Support in the financing process**

EPC ASSESSMENT TOOL

OUR APPROACH

Validation of standardised energy efficiency measures scenarios

*Feasibility assessment
Profitability projection
Risk assessment*

GREEN RATING™

METHODOLOGY

Four levels of performance

ACTUAL

Covers the building as it is, with its operation and tenants' behaviour

POTENTIAL ACTUAL

Achievable through implementation of operational and behavioural recommendations

ACTUAL

KEY INDICATORS

GREEN RATING FOR EPC

UPDATED GR METHODOLOGY

Methodology characteristics

Building typology specific calculations

Standardized Energy Efficiency measures

Standardized building data entry

Standardized recommendation calculation

Integration of EE measures

46 measures identified and described

Each measure independently identified and calculated

Limited auditor flexibility

Independent calculation sheet for each measure

Tool adjustments

New entry tabs data

New data entry fields

New calculations

GREEN RATING FOR EPC

UPDATED GR METHODOLOGY

Identification of Energy Efficiency Measures:

By the Tool, based on building data provided
By the Auditor, from the default list

Default Energy Efficiency Measures

Below you can see all default energy efficiency measures identified by the tool.
Please select the measures you would like to include in your calculations.

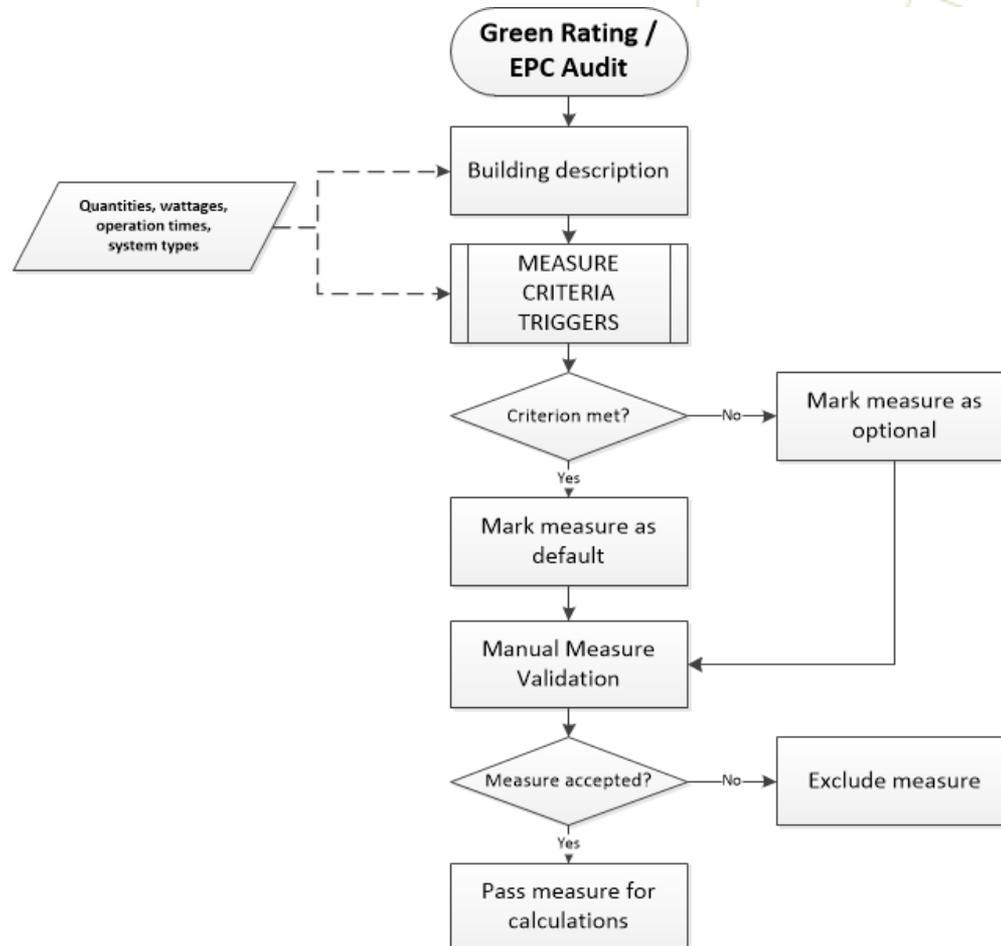

No.	Measure	Include (yes/no)	No.	Measure	Include (yes/no)
1	Substitution of conventional lamps	<input type="checkbox"/>	24	Pipework and boiler insulation	<input type="checkbox"/>
2	Replacement of lamps ballast	<input type="checkbox"/>	25	Variable frequency drives for pumps	<input type="checkbox"/>
3	Occupancy and presence sensors	<input type="checkbox"/>	26	Heat recovery systems	<input type="checkbox"/>
4	Photocell to dim luminous flux based on natural light	<input type="checkbox"/>	27	Water saving aerators	<input type="checkbox"/>
5	Occupancy and presence sensors combined with photocell	<input type="checkbox"/>	28	Swimming pool heat cover	<input type="checkbox"/>
6	Substitution of a low efficiency chiller with inverter chiller	<input type="checkbox"/>	29	Substitution or implementation of heat exchanger	<input type="checkbox"/>
7	Substitution of a low efficiency heat pumps with high efficiency	<input type="checkbox"/>	30	Substitution of conventional boiler with condensing boiler	<input type="checkbox"/>
8	Freecooling system	<input type="checkbox"/>	31	Substitution of the boiler burner	<input type="checkbox"/>
9	Thermostatic valves for radiators	<input type="checkbox"/>	32	Pipework and boiler insulation	<input type="checkbox"/>
10	Variable frequency drives for air handling units by CO2 sensors or occupancy sensors	<input type="checkbox"/>	33	Variable frequency drives for pumps	<input type="checkbox"/>
11	Variable frequency drives for extraction vents controlled by CO2 sensors or occupancy sensors	<input type="checkbox"/>	34	Micro Cogeneration	<input type="checkbox"/>
12	Variable frequency drives for air handling units and extraction vents controlled by CO2 sensors or occupancy sensors	<input type="checkbox"/>	35	Geothermal heat pump	<input type="checkbox"/>
13	Installation of biomass boiler for heating	<input type="checkbox"/>	36	Solar thermal plant	<input type="checkbox"/>
14	HVAC schedule definition	<input type="checkbox"/>	37	Photovoltaic plant	<input type="checkbox"/>
15	Automatically shut off air conditioning or heating when a monitored door or	<input type="checkbox"/>	38	Small wind turbine	<input type="checkbox"/>
16	Substitution of doors	<input type="checkbox"/>	39	Micro hydropower	<input type="checkbox"/>
17	Substitution of windows	<input type="checkbox"/>	40	Capacitive power factor correction	<input type="checkbox"/>
18	Air curtains	<input type="checkbox"/>	41	Building Energy Management System	<input type="checkbox"/>
19	Thermal insulation of building envelope	<input type="checkbox"/>	42	Substitution of hydraulic motors with electric motors in elevators	<input type="checkbox"/>
20	Installation of sun shading devices	<input type="checkbox"/>	43	Substitution of conventional pumps with high efficiency pumps	<input type="checkbox"/>
21	Improve solar factor	<input type="checkbox"/>	44	Implementation of Energy Star procedure in computers	<input type="checkbox"/>
22	Substitution of conventional boiler with condensing boiler	<input type="checkbox"/>	45	Substitution of conventional computer monitors with TFT	<input type="checkbox"/>
23	Substitution of the boiler burner	<input type="checkbox"/>	46	Substitution of conventional appliances with efficient appliances	<input type="checkbox"/>

Measure Generation

GR Tool Calculates the EE Measures

Measure Transfer

GR Tool generates one Financial Tool per Measure or Group of Measures

GR Tool transfers Measure Data to the Financial Tool

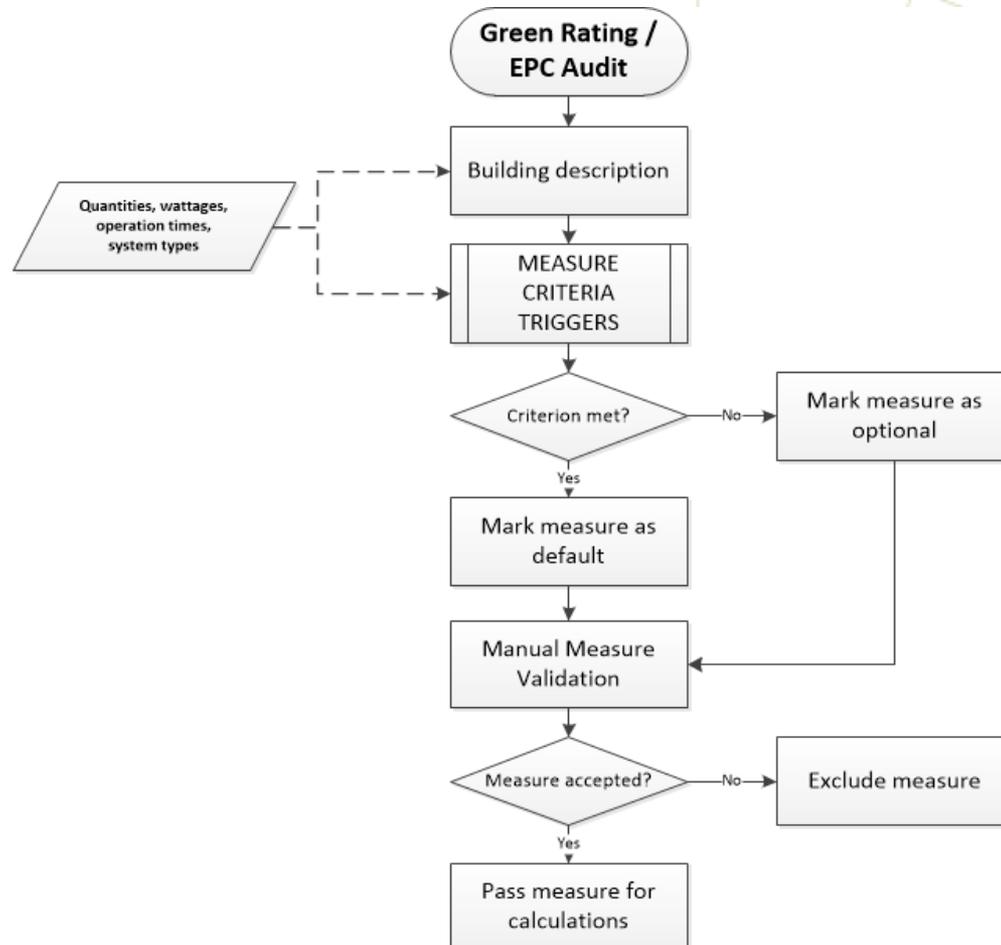

Iterative Financial Calculation

Each copy of the Financial Tool calculates its own set of measures

GR Tool extracts results from all copies of the Financial Tool and presents six top results

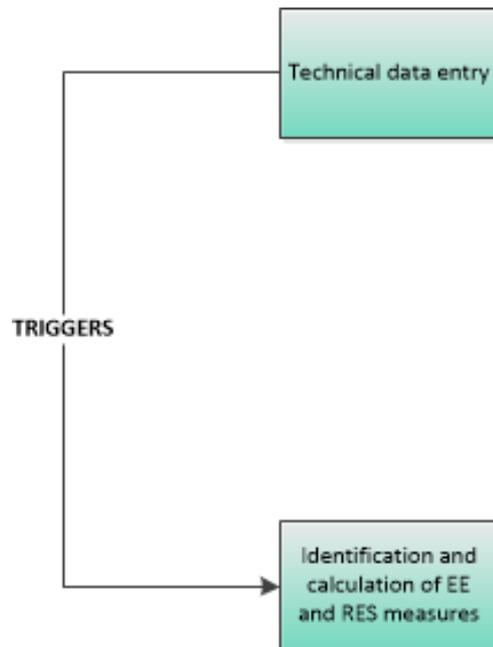

GREEN RATING FOR EPC

UPDATED GR METHODOLOGY

GREEN RATING FOR EPC

THE PROCESS

It's the technical data that triggers potential default measures

For example:

- Lighting with standard ballast will trigger ballast retrofitting measure
- Low efficiency boiler burner will trigger boiler burner replacement measure

Correct and complete technical data entry is crucial to ensure relevant measures are identified and correctly calculated

GREEN RATING FOR EPC

THE PROCESS

Identification and calculation of EE and RES measures

Each measure is identified and calculated independently:

Energy use	Measure n.º	Title	Criteria				
			Halogen lamps	Incandescent lamps	Fluocompact lamps	T12 Fluorescent tubes	T8 Fluorescent tubes
Lighting	1	Substitution of conventional lamps	Halogen lamps	Incandescent lamps	Fluocompact lamps	T12 Fluorescent tubes	T8 Fluorescent tubes
	2	Replacement of lamps ballast	Standard ballasts				
	3	Occupancy and presence sensors	Central switching	Local manual switching	Motion sensors to zones other than office	Daylight sensors	No controls (operation 24/7)
	4	Photocell to dim luminous flux based on natural light	Central switching	Local manual switching	Motion sensors to zones other than office	Motion sensors including office	No controls (operation 24/7)
	5	Occupancy and presence sensors combined with photocell	Central switching	Local manual switching	Motion sensors to zones other than office	Motion sensors including office	Daylight sensors
Heating, Ventilation and Air Conditioning	6	Substitution of a low efficiency chiller with inverter chiller		2.5	2.5		
	7	Substitution of a low efficiency heat pumps with high efficiency		2.5	2.5		
	8	Freecooling system	No				
	9	Thermostatic valves for radiators	No				
	10	Variable frequency drives for air handling units by CO2 sensors or occupancy sensors	No				
	11	Variable frequency drives for extraction vents controlled by CO2 sensors or occupancy sensors	No				
	12	Variable frequency drives for air handling units and extraction vents controlled by CO2 sensors or occupancy sensors	No				
	13	Installation of biomass boiler for heating	Normal boiler	Low temperature boiler	Condensation boiler	District heating network	Electricity
	14	HVAC schedule definition	No				
	15	Automatically shut off air conditioning or heating when a monitored door or window remains open for a period of time	No				
	16	Substitution of doors	NO CRITERION				
	17	Substitution of windows		2			
	18	Air curtains	NO CRITERION				
	19	Thermal insulation of building envelope		0.35			
	20	Installation of sun shading devices	None		Tinted glazing		
	21	Improve solar factor		0.6			
	22	Substitution of conventional boiler with condensing boiler	Normal boiler	Low temperature boiler

TRUST EPC SOUTH

MAIN RESULTS ACHIEVED

- **National Discussion Groups**
 - Addressing national market barriers and solutions
- **National EPC market reports**
 - Portugal, Spain, France, Italy, Croatia and Greece
- **Modelisation of Energy Saving Measures**
 - 46 technical models
- **Upgraded Green Rating methodology**
- **Investment Assessment and benchmarking tool**
 - Testing phase
- **Identification and assessment of a pipeline of projects**
 - 25 EPC projects identified so far
 - Assessment ongoing
