

# **22<sup>nd</sup> Electricity Regulatory Forum Florence, 22-23 May 2012**

**Input from IFIEC Europe & CEFIC to  
item 1: Follow-up to Roadmap 2050:  
renewables integration into the internal  
energy market**

# Roadmap 2050

- IFIEC & CEFIC welcome the discussion on renewables integration
  - based on different scenarios;
  - looking at the impact “on the field” on the different network codes.
- A balanced fuel mix not only looks at the environmental / climate impact, but also allows security of supply and competitive prices
  - CEFIC & IFIEC support affordable, reliable AND clean energy !
- CEFIC & IFIEC suggest
  - to discuss the whole of the fuel mix, not only renewables;
  - an efficient use of scarce resources in climate policy, with a balance between energy efficiency measures, RES integration, more efficient transportation systems, ...;
  - cost efficient investments in renewables (every € does not deliver the same reduction in CO<sub>2</sub>...)
  - more research into valuable alternatives (generation technologies, storage, ...).
