

EURELECTRIC comments on the 2012 TYNDP

- TYNDP 2012 a total of 51,500 km of new lines planned for the forthcoming ten-year period = 17% of current grid
- **BUT** only 52 out of 495 investment projects contained in the TYNDP 2010 commissioned to date!
- Need for **grid development** and **public acceptance**
- Need for a **European approach**, especially when it comes to offshore wind park and common benefits
