

State of play on the new Transparency Platform

Florence Forum
22-23 May 2012

Towards a new Regulation on Transparency on fundamental electricity data

ERGEG advice on Comitology Guidelines
on fundamental electricity data transparency (December 2010)

EC Public consultation on the ERGEG Proposal
(Summer 2011) before proposal of a Commission Regulation

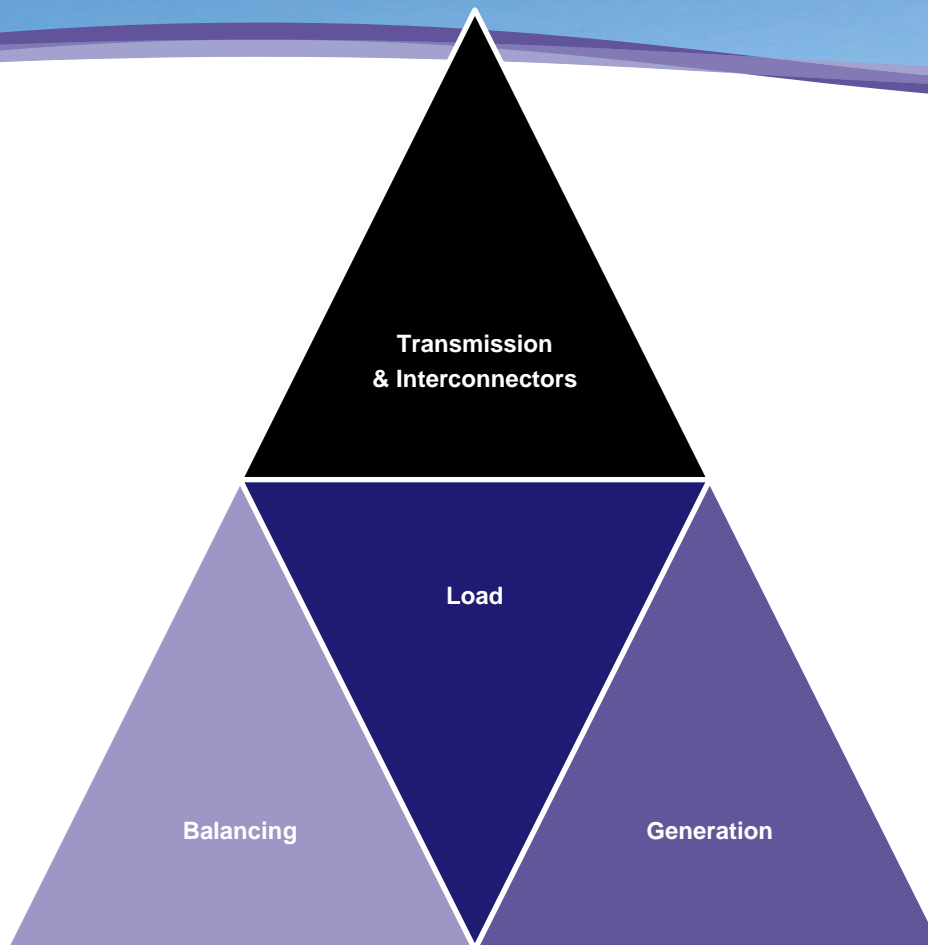

Presentation draft Transparency Regulation to the Electricity XB Committee 6 June 2012
Start of the Comitology Process: July - September

Estimated adoption: Dec 2012 to March 2013

The new ENTSO-E Transparency platform project - Scope

The EMFIP project:

- Launched in 2011, anticipates the new EC Transparency Regulation
- 6 M€ budget at ENTSO-E level
 - IT provider selection → mid '12
 - First release → mid '13
 - Fully operational → mid' 14
- Regional projects, information flows from primary owners
- Potential delays in the Regulation may impact the transparency platform cost & release date

A central information transparency platform for fundamental electricity data managed by ENTSO-E

Engaging with stakeholders is key

- **Stakeholders to play a key role in developing detailed definitions following the new Transparency Regulation**
- **ENTSO-E will launch a Transparency Advisory Group with stakeholders once the text of the Regulation is known (around mid 2012)**
- **This group aims to advise ENTSO-E in the process of creating a 'Handbook' including agreed definitions of data to be published**
- **Presentation of the IT technical documentation**

Interaction between REMIT and Transparency Regulation

Under Art.8.6, for fundamental data (gas and electricity markets), the EC must:

- “*adopt uniform rules on the reporting of information to be provided (...) and on appropriate thresholds*” for report and;
- “*lay down the timing and form in which that information is to be reported*”

ENTSO-E calls for coherency between REMIT Implementing Acts and the Transparency Regulation to avoid:

- Publication of similar but a little different types of data and;
- Duplication of IT systems

In order to allow:

- Use of existing national or regional IT information flows.

Thank you very much for your attention!
