Recommendations
for effective public participation

- ✓ Investor should talk with residents from the beginning and accept them as full participants in civil discussions.
- ✓ Investor should immediately fix all devastation his company made to improve his reliability.
- ✓ Investor should propose alternative method of coal extraction not so aggressive.
- ✓ Law and authorities should protect citizens.
- ✓ Coal? But not at any price. In this case social costs and specially a value of water outweigh value of coal.

Civilization needs energy,

but energy cannot destroy Civilization
