

Article 35 Euratom

CALL FOR TENDERS

N° ENER/D3/2018-148

**Inventory of Member States environmental
radioactivity monitoring systems**

Objectives of the project

The principal objective of this project is to provide the Commission with an inventory of the monitoring systems in place for environmental and food radioactivity in all EU MS.

The results will provide background for future verifications by the Commission and will enable MS to understand how the systems in place compare with approaches taken in other MS.

The results will be published on the Europa website to provide interested parties with a comprehensive overview of the environmental monitoring systems in all MS.

In addition, the results will be discussed in a workshop and can be used also in the related Commission report to the European Parliament .
