CBA methodology

GIE welcomes the work done so far by ENTSOG on the CBA methodology, but some more work might be necessary

GIE would like to stress the following aspects :

- Remaining ambiguity on articulation between Project-Specific (PS) CBA and European-System-Wide (ESW) CBA
- Not always an obvious link between CBA indicators and criteria set in Regulation (EU) No 347/2013, art. 4 (market integration, security of supply, competition and sustainability)
- Does the methodology adequately reflect the regulation?

CBA methodology

⇒ **Need for :**

- **Clarification on the articulation between PS CBA and ESW CBA**
- **Greater highlight of benefits LNG terminals and gas storages provide to the European system**
 - Improved interconnections will alleviate bottleneck issues
- **Projects which provide a high degree of regional or Union-Wide security of supply**
- **Another workshop is needed for further clarification and involvement of all gas infrastructure operators (TSO, SSO, LSO)**

Thank you for your kind attention
