

- OGP commends ENTSOG on the development of the network code on Interoperability, and supports the draft code
- Interconnection Agreements aim to remove interface issues at IPs, with transparent consultation where users could be affected
- TSO role in Gas Quality/Odourisation issues is limited by what Member States/NRAs determine
  - TSO's flexibility to accommodate gas can play an important role in interoperability and should not be restricted
- OGP welcomes flexible implementation of the common Data Exchange Solution
  - TSOs to facilitate early adopters, but network users are free to implement the common solution at a later time
