

Congestion Management procedures

- OGP welcomes ACER's "Issue paper" on CMP
- CMP-measures help to bring unused capacity back to the market
 - Functioning secondary capacity market should be preferred
 - OSBB could help in the development of secondary market
- OSBB should not be limited to day-ahead capacity products, and buy-back should not interrupt users' firm capacity rights
- Potential benefit of OSBB should be explored because it could be more effective than firm day-ahead UIOLI (which only frees up small amounts of day-ahead capacity)
 - Delayed implementation of OSBB may make it difficult to decide on its effectiveness (based on March 2015 report)
 - ACER/NRAs should coordinate implementation of OSBB
