

11th Meeting of the European Electricity Regulatory Forum

Rome-16 and 17 September 2004

Joan Prat

Guidelines Congestion Management Geode Position

- A European single market means NO BORDERS
- Today BORDERS ARE STILL THERE
 - Lack of capacities in some borders: permitting big companies to
 - close national markets
 - keep dominant positions

Guidelines Congestion Management

Geode Position

- GEODE asks for good and efficient coordination of congestion procedure
- GEODE considers absolutely insufficient TSO's coordination expected by the Commission
- To separate:
 - Managing the electricity system: strictly technical and subject to regulation → TSO's
 - Supplying: commercial and subject to competition → Suppliers

Guidelines Congestion Management

Geode Position

- **NO TRANSACTION SHOULD BE DENIED:
REDISPATCHING MECHANISMS**
- GEODE proposes the costs of **REDISPATCHING
MECHANISMS**: recognised by regulators and included
into transmission tariffs
- Cost of redispatching should be supported by all
consumers through tariffs: all get the advantages of
the creation of an European Market

Guidelines Congestion Management

Geode Position

- TSO should **NOT BENEFIT FROM REVENUES** resulting from congestion market mechanisms
- GEODE considers **MANAGEMENT OF CONGESTION AS A COST NOT AN INCOME**
- Allocation mechanisms proposed by the Commission:
 - just companies linked to TSO's have information and capacities to deal with them
 - permitting to keep national markets closed
