1. Key energy figures

### Energy mix – 2021

- Coal and coal products: 1%
- Oil and oil products: 43%
- Natural gas: 31%
- Renewables: 27%

### Electricity mix - 2021

- Solid fossil fuels: 1%
- Natural gas: 68%
- Oil and petroleum products: 3%
- Renewables, biofuels, biomass: 9%

5. Recovery and Resilience Plan contribution to the Green Transition

Total budget\(^1\): EUR 15.54bn in grants and EUR 2.7bn in loans

Estimated expenditure contributing to the green transition: 54.98\(^2\)

![Climate tagged contribution diagram]

6. Energy Country-Specific Recommendation (CSR) 2022\(^3\)

Reduce overall reliance on fossil fuels, including in the transport sector. Accelerate the deployment of renewables by upgrading electricity transmission and distribution grids, enabling investments in electricity storage and streamlining permitting procedures to allow for further development of wind, particularly offshore, and solar electricity production, as well as renewable hydrogen production. Strengthen the incentives framework for energy efficiency investments in buildings. Increase energy interconnections.

---

\(^1\) Updated allocation on the basis of Article 11(2) of the RRF Regulation

\(^2\) Recovery and Resilience Scoreboard (europa.eu)

\(^3\) Council of the European Union 9770/22
Notes:

(b) Negative value indicates net exporter: country that exports more fuels than it consumes. Values higher than 100% mostly refer to the build of stocks (increase of fuel in stocks), however might be also a result of statistical discrepancies in raw data.

(c) Eurostat (2020), share of Russian imports over total imports of natural gas, crude oil and hard coal. For the EU27 average, the total imports are based on extra-EU27 imports. Crude oil does not include refined oil products. PT imported 4% of its refined oil from Russia in 2020. Accounting for the secondary dependence on Russian coal through intra-EU imports would lead to the estimation that PT has a 55% Russian import dependency on coal, noting that the share of coal in the energy mix is very small (2.6%).

(d) As of 28/09/2022, 13 Member States are either partially or fully cut off from Russian gas (LT, BG, PL, DE, FI, DK, NL, IT, FR, AT, CZ, SL, LV).

(e) The graph has been created on 15/09/2022 and covers filling level data from 01 November 2021 to 13 September 2022.

(f) Households electricity prices, band DC, from EUROSTAT (link: https://ec.europa.eu/eurostat/databrowser/view/NRG_PC_204_custom_3372694/default/table)

Industrial electricity prices, band ID, from EUROSTAT (link: https://ec.europa.eu/eurostat/databrowser/view/NRG_PC_205_custom_3372745/default/table)

Households gas prices, band D2, from EUROSTAT (link: https://ec.europa.eu/eurostat/databrowser/view/NRG_PC_202_custom_3407307/default/table)

Industrial gas prices, band I3, from EUROSTAT (link: https://ec.europa.eu/eurostat/databrowser/view/NRG_PC_203_custom_3407318/default/table)

Wholesale Electricity and Gas prices, Platts (subscription-based access).

Platts calculates wholesale electricity prices based on weighted averages of traded volumes.

Wholesale market prices for Portugal might not be representative, as volumes traded on the national markets are very limited compared to imports of LNG

(g) The green objective is presented under 7 different categories taken into account the intervention fields (SWD(2021) 184 final): Renewables (028-032), Hydrogen (022, 027, 029, 032, 033, 074, 077 and ADHOC), Energy Efficiency in the public sector (026-026bis), Energy Efficiency in private buildings (025-025bis), Energy Efficiency in New Buildings (025ter), Energy Efficiency in Industry (24-024ter), Grids (033-034bis), Skills (01). For the cases in which hydrogen measure is identified in one of the following intervention fields (i.e. 029 - Renewable energy: solar; 032 - Other renewable energy (including geothermal energy); 033 - Smart Energy Systems (including smart grids and ICT systems) and related storage.) this amount was deducted from the respective categories (i.e. renewables and grids).
